this book is a comprehensive guide to radiopharmaceutical chemistry the stunning clinical successes of nuclear imaging and targeted radiotherapy have resulted in rapid growth in the field of radiopharmaceutical chemistry an essential component of nuclear medicine and radiology however at this point interest in the field outpaces the academic and educational infrastructure needed to train radiopharmaceutical chemists for example the vast majority of texts that address radiopharmaceutical chemistry do so only peripherally focusing instead on nuclear chemistry i.e. nuclear reactions in reactors heavy element radiochemistry i.e. the decomposition of radioactive waste or solely on the clinical applications of radiopharmaceuticals e.g. the use of PET tracers in oncology this text fills that gap by focusing on the chemistry of radiopharmaceuticals with key coverage of how that knowledge translates to the development of diagnostic and therapeutic radiopharmaceuticals for the clinic the text is divided into three overarching sections first principles radiochemistry and special topics the first is a general overview covering fundamental and broad issues like the production of radionuclides and basics of radiochemistry the second section is the main focus of the book in

this section each chapter s author will delve much deeper into the subject matter covering both well established and state of the art techniques in radiopharmaceutical chemistry this section will be divided according to radionuclide and will include chapters on radiolabeling methods using all of the common nuclides employed in radiopharmaceuticals including four chapters on the ubiquitously used fluorine 18 and a best of the rest chapter to cover emerging radionuclides finally the third section of the book is dedicated to special topics with important information for radiochemists including bioconjugation methods click chemistry in radiochemistry and radiochemical instrumentation this is an ideal educational guide for nuclear medicine physicians radiologists and radiopharmaceutical chemists as well as residents and trainees in all of these areas

written by the author the study guide is keyed to the learning goals in the text and designed to promote active learning through a variety of exercises with answers and mastery exams also contains complete solutions to odd numbered problems

this book presents volume 2 of selected research papers presented at the second international conference on digital technologies and applications icdta 23 this book highlights the latest innovations in digital technologies as artificial intelligence internet of things embedded systems network technology digital transformation and their applications in several areas as industry 4 0 renewable energy mechatronics digital healthcare etc the respective papers encourage and inspire researchers industry professionals and policymakers to put these methods into practice
