during ten years serving with the usda soil conservation service scs now known as the natural resources conservation service nrsc i became amazed at how millions of dollars in contract monies were spent based on simplistic hydrologic models as project engineer in western kansas i was responsible for building flood control dams authorized under public law 566 in the wet walnut river watershed this watershed is within the arkansas red river basin as is the illinois river basin referred to extensively

in this book after building nearly 18 of these structures i became assistant state engineer in michigan and for a short time state engineer for nracs again we based our entire design and construction program on simplified relationships variously referred to as the scs method i recall announcing that i was going to pursue a doctoral degree and develop a new hydrologic model one of my agency s chief engineers remarked oh no not another model since then i hope that i have not built just another model but have significantly advanced the state of hydrologic modeling for both researchers and practitioners using distributed hydrologic techniques described in this book i also hope one day to forecast the response of the dams i built

offers information necessary for the development of mathematical models and numerical techniques to solve specific drying problems the book addresses difficult issues involved with the drying equations of numerical analysis including mesh generation discretization strategies the nonlinear equation set and the linearized algebraic system convergence criteria time step control experimental validation optimum methods of visualization results and more
