many of the distinctive and useful phenomena of soft matter come from its interaction with interfaces examples are the peeling of a strip of adhesive tape the coating of a surface the curling of a fiber via capillary forces or the collapse of a porous sponge these interfacial phenomena are distinct from the intrinsic behavior of a soft material like a gel or a microemulsion yet many forms of interfacial phenomena can be understood via common principles valid for many forms of soft matter our goal in organizing this school was to give students a grasp of these common principles and their many ramifications and possibilities the les houches summer school comprised over fifty 90 minute lectures over four weeks four four lecture courses by howard stone michael cates david nelson and I mahadevan served as an anchor for the program a number of shorter courses and seminars rounded out the school this volume collects the lecture notes of the school

provides scientists engaged in basic and applied polymer research with a clear understanding of the current status of polymer photophysics offers topics ranging from luminescence decay analysis of biologically important polymers to investigation of electronic energy relaxation in the synthesis of aromatic vinyl polymers using picosecond fluorescence spectroscopy provides discussions on energy migration in polymer films and solutions as well as fluorescent conformational probes of polymers in solution dye labeling techniques kinetic spectroscopy excitation migration triplet antenna effect and more

this book is a collation of the contributions presented at a major conference on isolated neutron stars held in london in april 2006 forty years after the discovery of radio pulsars it presents an up to date description of the new vision of isolated neutron stars that has emerged in recent years the great variety of isolated neutron stars from pulsars to magnetars is well covered by descriptions of recent observational results and presentations of the latest theoretical interpretation of these data

this unique text discusses the solution self assembly of block copolymers and covers all aspects from basic physical chemistry to applications in soft nanotechnology recent advances have enabled the preparation of new materials with novel self assembling structures functionality and responsiveness and there have also been concomitant advances in theory and modelling the present text covers the principles of self assembly in both dilute and concentrated solution for example micellization and mesophase formation etc in chapters 2 and 3 respectively chapter 4 covers polyelectrolyte block copolymers these materials are attracting significant attention from researchers and a solid basis for understanding their physical chemistry is emerging and this is discussed the next chapter discusses adsorption of block copolymers from solution at liquid and solid interfaces the concluding chapter presents a discussion of selected applications focussing on several important new concepts the book is aimed at researchers in polymer science as well as industrial scientists involved in the polymer and coatings industries it will also be of interest to scientists working in soft matter self assembly and self organizing polymers
