excerpt from a manual of determinative bacteriology preliminary to studies on the bacterial flora of cultivated soils the writer undertook an arrangement of the several hundred species of bacteria already described with the view of

identifying the forms isolated or at least of determining whether they were new to science the labor involved in this arrangement has been so great that it was decided to embody the results in the present form that others might have the advantage of them the writer does not claim that the system of arrangement is perfect or not open to criticism the best use only could be made of the facts and material available the present tables serve therefore only for purposes of identification and not necessarily for those of classification for this reason the present book has been termed a manual of determinative rather than one of systematic bacteriology to the student working in the laboratory the determination of unknown bacteria has been almost impossible except with the expenditure of an amount of labor which was impracticable with the use of the present manual it is believed that the teacher can place a given culture in the hands of his pupil and expect him to determine it as is done with other organic forms it is therefore hoped that the present work will serve a useful purpose as a laboratory manual the chapter on morphology has been appended in order to make clearer the system of classification into orders and genera about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at [forgottenbooks.com](http://forgottenbooks.com) this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
