sebastian pape discusses two different scenarios for authentication on the one hand users cannot trust their devices and nevertheless want to be able to do secure authentication on the other hand users may not want to be tracked while

their service provider does not want them to share their credentials many users may not be able to determine whether their device is trustworthy i e it might contain malware one solution is to use visual cryptography for authentication the author generalizes this concept to human decipherable encryption schemes and establishes a relationship to captchas he proposes a new security model and presents the first visual encryption scheme which makes use of noise to complicate the adversary s task to prevent service providers from keeping their users under surveillance anonymous credentials may be used however sometimes it is desirable to prevent the users from sharing their credentials the author compares existing approaches based on non transferable anonymous credentials and proposes an approach which combines biometrics and smartcards
