how this book differs this book is about the calculus what distinguishes it however from other books is that it uses the pocket calculator to illustrate the theory a computation that requires hours of labor when done by hand with tables is quite inappropriate as an example or exercise in a beginning calculus course but that same computation can become a delicate illustration of the theory when the student does it in seconds on his calculator t furthermore the student s own personal involvement and easy accomplishment give hi reassurance and en couragement the machine is like a microscope and its magnification is a hundred millionfold we shall be interested in limits and no stage of numerical approximation proves anything about the limit however the derivative of $f(x) = x^2$ for instance acquires real meaning when a student first appreciates its values as numbers as limits of $\frac{f(x+h)-f(x)}{h}$ 10 100 1000 t a quick example is $\frac{1^2 - 0^2}{1 - 0} = 1$ another example is $\frac{1.01^2 - 1^2}{1.01 - 1} = 2.01$ in the function $e^{3t} = 9 \cdot 3^t$ ix difference quotients of numbers rather than as values of a function that is itself the result of abstract manipulation
