this textbook presents a special solution to underdetermined linear systems where the number of nonzero entries in the solution is very small compared to the total number of entries this is called a sparse solution since underdetermined linear systems can be very different the authors explain how to compute a sparse solution using many approaches sparse solutions of underdetermined linear systems and their applications contains 64 algorithms for finding sparse solutions of underdetermined linear systems and their applications for matrix completion graph clustering and phase retrieval and provides a detailed explanation of these algorithms including derivations and convergence analysis exercises for each chapter help readers understand the material this textbook is appropriate for graduate students in math and applied math computer science statistics data science and engineering advisors and postdoctoral scholars will also find the book interesting and useful

in this book we gather recent mathematical developments and engineering applications of trefftz methods with particular emphasis on the method of fundamental solutions mfs these are true meshless methods that have the advantage of avoiding the need to set up a mesh altogether and therefore going beyond the reduction of the mesh to a boundary these trefftz methods have advantages in several engineering applications for instance in inverse problems where the domain is unknown and some numerical methods would require a remeshing approach trefftz methods are also known to perform very well with regular domains and regular data in boundary value problems achieving exponential convergence on the other hand they may also under certain conditions exhibit instabilities and lead to ill conditioned systems this book is divided into ten chapters that illustrate recent advances in trefftz methods and their application to engineering problems the first eight chapters are devoted to the mfs and variants whereas the last two chapters are devoted to related meshless engineering applications part of these selected contributions were presented in the 9th international conference on trefftz methods and 5th international conference on the mfs held in 2019 july 29 31 in lisbon portugal
