since the 1980s software agents and multi agent systems have grown into what is now one of the most active areas of research and development activity in computing generally one of the most important reasons for the current intensity of interest in the agent based computing paradigm certainly is that the concept of an agent as an autonomous system capable of interacting with other agents in order to satisfy its design objectives is a natural one for software designers this recognition has led to the growth of interest in agents as a new paradigm for software engineering this book reflects the state of the art in the field by presenting 14 revised full papers accepted for the second workshop on this topic aose 2001 together with five invited survey articles the book offers topical sections on societies and organizations protocols and interaction frameworks uml and agent systems agent oriented requirements capture and specification and analysis and design

formal languages and computation models and their applications gives a clear comprehensive introduction to formal language theory and its applications in computer science it covers all rudimental topics concerning formal languages and their models especially grammars and automata and sketches the basic ideas underlying the theory of computation including computability decidability and computational complexity emphasizing the relationship between theory and application the book describes many real world applications including computer science engineering techniques for language processing and their implementation covers the theory of formal languages and their models including all essential concepts and properties explains how language models underlie language processors pays a special attention to programming language analyzers such as scanners and parsers based on four language models regular expressions finite automata context free grammars and pushdown automata discusses the mathematical notion of a turing machine as a universally accepted formalization of the intuitive notion of a procedure reviews the general theory of computation particularly computability and decidability considers problem deciding algorithms in terms of their computational complexity measured according to time and space requirements points out that some problems are decidable in principle but they are in fact intractable problems for absurdly high computational requirements of the algorithms that decide them in short this book represents a theoretically oriented treatment of formal languages and their models with a focus on their applications it introduces all formalisms concerning them with enough rigors to make all results quite clear and valid every complicated mathematical passage is preceded by its intuitive explanation so that even the most complex parts of the book are easy to grasp after studying this book both student and

professional should be able to understand the fundamental theory of formal languages and computation write language processors and confidently follow most advanced books on the subject

the united nations 2030 agenda has defined 17 goals to promote sustainable development on a global scale it s based on five critical dimensions known as the 5ps people prosperity planet partnership and peace many of the goals can be connected to psychology or educational sciences for example improving health and well being sdg3 ensuring quality education sdg4 promoting gender equality sdg5 and decent work sdg8 and reducing inequality sdg10 this means that researchers in the field of psychology or related sciences can give substantial contributions to support the achievement of the goals of agenda 2030 research on the contribution of psychology and educational sciences in achieving these goals should be encouraged
