stock markets play a key role in corporate financing in asia however despite
their increasing importance in terms of size and cross border investment
activity the region s markets are reputed to be more idiosyncratic and less
reliant on economic and corporate fundamentals in their pricing using a model
that draws on international asset pricing and economic theory as well as
accounting literature we find evidence of greater idiosyncratic influences in the
pricing of asia s stock markets compared to their g 7 counterparts beyond the
identified systematic factors and local fundamentals we also show proof of a
significant relationship between the strength of implementation of securities
regulations and the noise in stock pricing which suggests that improvements in

the development of effective securities markets gary schinasi international
monetary fund one of the more important lessons of the crisis of the 1990s not
just the asian crisis is that the performance and structure of a country s
financial system is an important fundamental factor for assessing that country
s overall economic performance and prospects and as a destination for
investment and asset returns market participants that are presently managing
international portfolios now understand this very well and as we all know many
countries are making strong efforts to reform their financial infrastructures and
move their financial systems more in the direction of a market intermediated
financial system and away from an exclusively bank intermediated system
these reform efforts are putting in place some of the important infrastructure
elements that are necessary for developing effective securities markets
however emphasis should be placed on the word necessary as many of these
measures and all of them taken together are only necessary and not sufficient
for establishing effective security markets
