Statics The World of Equilibrium Statics focuses on objects at rest or in a state of constant velocity This means the net force and net moment acting on the object are zero Understanding statics is crucial for designing stable structures from skyscrapers to bridges

Practical Example Imagine designing a simple cantilever beam like a diving board Statics principles help determine the necessary beam strength and support to prevent collapse under a divers weight Youd analyze forces and moments acting on the beam to ensure 2 equilibrium

Howto Approach Statics Problems

- 1 Draw a Free Body Diagram FBD This is crucial Isolate the object of interest and represent all external forces acting on it gravity applied loads reactions at supports
- 2 Establish Coordinate System Choose a convenient xy coordinate system
- 3 Apply Equilibrium Equations For 2D problems youll typically use three equations $\sum F_x = 0$ $\sum F_y = 0$ and $\sum M = 0$ sum of forces in xdirection ydirection and sum of moments about a point
- 4 Solve for Unknowns Use algebra to solve for the unknown forces or reactions

Visual Include a simple welllabeled Free Body Diagram of a cantilever beam with a weight at the end

Dynamics The World of Motion Dynamics on the other hand deals with objects in motion It involves analyzing forces and their effects on the acceleration of objects Understanding dynamics is essential for designing everything from cars and airplanes to robots and spacecraft

Practical Example Consider the design of a rollercoaster Dynamics helps engineers determine the track profile speed and forces experienced by the passengers at various points throughout the ride ensuring safety and excitement

Howto Approach Dynamics Problems

- 1 Identify the System Clearly define the object or system youre analyzing
- 2 Draw a FBD Similar to statics but now youll need to consider accelerations
- 3 Apply Newtons Second Law $F = ma$ Force mass x acceleration This equation is fundamental to dynamics
- 4 Use Kinematics Kinematics describes motion position velocity acceleration without considering the forces causing the motion Youll often need kinematic equations to solve for unknowns
- 5 Solve for Unknowns Again use algebra to solve for the desired quantities acceleration velocity displacement etc

Visual Include a simple diagram showing forces acting on a rollercoaster car on a curved track
