features engine and cylinder head service repair and reconditioning including camshaft toothed belt setup and adjustment coverage of motronic 5 9 7 5 and diesel turbo direct injection tdi engine management systems drivetrain maintenance troubleshooting adjustment and repair including hydraulic clutch gearshift linkage and drive axles suspension component replacement including front struts rear shocks rear coil springs and wheel bearing hub units repair information for abs edl asr esp brake systems heating and air conditioning repair including a c component replacement body adjustment and repairs including front and rear clip removal and installation wiring schematics for all circuits including fuse relay locations and a general explanation of electrical circuitry new scan tool section with obdii diagnostic trouble codes control module coding and readiness codes

this report documents phase iv of the highway maintenance concept vehicle hmcv project a pooled fund study sponsored by the departments of transportation of iowa pennsylvania and wisconsin this report provides the background including a brief history of the earlier phases of the project a systems overview and descriptions of the research conducted in phase iv finally the report provides conclusions and recommendations for future research background the goal of the highway maintenance concept vehicle pooled fund study is to provide travelers with the level of service defined by policy during the winter season at the least cost to taxpayers this goal is to be accomplished by using information regarding actual road conditions to facilitate and adjust snow and ice control activities the approach used in this study was to bring technology applications

from other industries to the highway maintenance vehicle this approach is evolutionary in that as emerging technologies and applications are found to be acceptable to the pooled fund states and as they appear that to have potential for supporting the study goals they become candidates for our research the objective of phase iv is to conduct limited deployment of selected technologies from phase iii by equipping a vehicle with proven advanced technologies and creating a mobile test laboratory for collecting road weather data the research quickly pointed out that investments in winter storm maintenance assets must be based on benefit cost analysis and related to improving level of service for example iowa has estimated the average cost of fighting a winter storm to be about 60 000 to 70 000 per hour typically the maintenance concept vehicle will have advanced technology equipment capable of applying precisely the correct amount of material accurately tailored to the existing and predicted pavement conditions hence a state using advanced technology could expect to have a noticeable impact on the average time taken to establish the winter driving service level if the concept vehicle and data produced by the vehicle are used to support decision making leading to reducing material usage and the average time by one hour a reasonable benefit cost will result data from the friction meter can be used to monitor and adjust snow and ice control activities and inform travelers of pavement surface conditions therefore final selection of successfully performing technologies will be based on the foundation statements and criteria developed by the study team

since its first appearance in 1950 pounder s marine diesel engines has served seagoing engineers students of the certificates of competency examinations and the marine engineering industry throughout the world each new edition has noted the changes in engine design and the influence of new technology and economic needs on the marine diesel engine now in its ninth edition pounder s retains the directness of approach and attention to essential detail that characterized its predecessors there are new chapters on monitoring control and himsen engines as well as information on developments in electronic controlled fuel injection it is fully updated to cover new legislation including that on emissions and provides details on enhancing overall efficiency and cutting co2 emissions after experience as a seagoing engineer with the british india steam navigation company doug woodyard held editorial positions with the institution of mechanical engineers and the institute of marine engineers he subsequently edited the motor ship journal for eight years before becoming a freelance editor specializing in shipping shipbuilding and marine engineering he is currently technical editor of marine propulsion and auxiliary machinery a contributing editor to speed at sea shipping world and shipbuilder and a technical press consultant to rolls royce commercial marine helps engineers to understand the latest changes to marine diesel engines careful organisation of the new edition enables readers to access the information they require brand new chapters focus on monitoring control systems and himsen engines over 270 high quality clearly labelled illustrations and figures to aid understanding and help engineers quickly identify what they need to know
