the st croix is one of three rivers discharging into the bay of fundy through passamaquoddy bay which supports the most productive fishery in the bay of fundy mean tidal amplitude at the head of the estuary is 6.1 m which combined with the considerable discharge from the st croix contributes to the generally high suspended load characteristic of the estuary the spring and autumn phytoplankton maxima are therefore restricted vertically by rapid light attenuation and distributed horizontally in somewhat patch fashion the groups of phytoplankton covered in this guide include diatoms the loricate chrysophytes of the genus binobryon and the dinoflagellates keys are provided for the identification of 108 diatoms 7 species of dinobryon and 8 dinoflagellate taxa comments are included about the collection of phytoplankton together with some guidance on the cleaning and preservation of diatoms
