this book is a continuation of our recently published book algebraic formalization of smart systems theory and practice it incorporates a new concept of quasi fractal algebraic systems based on a i maltsev s theory of algebraic systems and the theory of fractals developed by benoit mandelbrot to investigate smart systems in more detail the main tool used in the book quasi fractal algebraic systems helps us to see smart systems in more detail by adding new factors which e g make it possible to describe the previously indivisible elements of the initial model of factors the techniques presented include fixed point theorem theorems of group theory theory of boolean algebras and erdős renyi algorithms given its focus the book is intended for anyone interested in smart system theory

this book is a continuation of the algebraic formalization of smart systems theory and practice 2018 and algebraic identification of smart systems theory and practice 2021 algebraic logic refers to the connection between boolean algebra and classical propositional calculus this connection was discovered by george boole and then developed by other mathematicians such as c s peirce and ernst schroeder this trend culminated in the lindenbaum tarski algebras here we try to connect algebraic logic and quasi fractal technique based on algebraic formalization of smart systems to get facts about smart systems functioning and connections of their qualitative and quantitative indicators basic techniques we used algebraic quasi fractal systems erdős rényi algorithm a notion of giant component of an algebraic system fixed point theorem purities i e embeddings preserving property of an algebraic system the book is aimed for all interested in these issues

by an algebraic system or structure we mean a set together with a collection of algebraic operations defined on it this book is concerned with various kinds of problems automorphism groups of groups and of vector spaces linear groups along with abstract properties and applications to abstract groups in the first part various propositions concerning the automorphism groups of several algebraic systems are gathered together in the second part automorphism groups of groups takes primacy and the abstract properties of linear groups are also explored
