in order to investigate the effects of different types of capital controls on economic growth we construct a new measure of capital controls making this study one of the first to distinguish between controls on inflows and outflows contrary to previous studies we are able to show that capital controls do have an effect on economic growth we find that controls on capital inflows have a positive effect on economic growth while controls on outflows have detrimental effects moreover controls on equity markets are also found to have a negative impact on economic growth these results validate the theoretical arguments made by for instance mishkin 2001 and bekaert harvey and lundblad 2005

although the phenomenon of authoritarian elections has been a focal point for the literature on authoritarian institutions for more than a decade our understanding of the effect of authoritarian elections is still limited combining evidence from cross national studies with studies on selected cases relying on recent field work this book suggests a solution to the paradox of authoritarian elections rather than focusing on authoritarian elections as a uniform phenomenon it focuses on the differing conditions under which authoritarian elections occur it demonstrates that the capacities available to authoritarian rulers shape the effect of elections and high levels of state capacity and control over the economy increase the probability that authoritarian multi party elections will stabilize the regime where these capacities are limited the regime is more likely to succumb in the face of elections the findings imply that although multi party competition and state strength may be important prerequisites for democracy they can under some circumstances obstruct democratization by preventing the demise of dictatorships this text will be of key interest to scholars students and practitioners of democratization and to those who study autocracy and electoral authoritarianism as well as comparative politics more broadly
