this dissertation forwards a relational continuity model describing how intimate relational partners sustain their relationships over time as they cycle in and out of physical co presence the proposed model represents an integration of sigman s 1991 work on relational continuity with various research areas including relational maintenance interdependence and intimacy four studies were conducted toward validating the model study one is an inductive analysis of open ended data originating from interviews surveys and focus groups of over 500 individuals in geographically separated romantic family and friend relationships study one yielded 178 items constituting what sigman termed relational continuity constructional units rccus studies two and three are exploratory and confirmatory analyses of the proposed model s hierarchical structure in the context of long distance romantic relationships study two through principal axis analysis of the rccus derived in study one indicated the viability of the predicted nine factor model study three utilized structural equation modeling and demonstrated the proposed model s hierarchical structure provided markedly better fit than

alternative structures construct validity of the model's factors was explored and generally supported in study four consistent with predictions total continuity construction was positively related to romantic partners self-reported interdependence intimacy closeness and satisfaction total continuity construction moreover was negatively linked to partners reported emotional and social loneliness stress relationship ambivalence and distancing behaviors as elaborated in the concluding chapter the model appears well suited for a wide range of relational maintenance research especially amongst partners who experience periods of geographic separation from one another due to for example military deployment occupational travel immigration and education related travel also discussed are areas for theoretical advancement with particular emphasis on linear and cyclical temporal perspectives on continuity construction overall the model developed in this dissertation further elucidates the myriad means by which relationships are discursively and cognitively maintained over time and space

with the aim of simplifying relational database modeling database modeling step by step presents the standard approach to database normalization and then adds its own approach which is a more simplistic intuitive way to building relational database models going from basics to contemporary topics the book opens with relational data modeling and ends with bigdata database modeling following a road map of the evolution in relational modeling and including brief introductions to data warehousing and bigdata modeling a break down of the elements of a model explains what makes up a relational data model this is followed by a comparison between standard normalization and a more simplistic intuitive approach to data modeling that a beginner can follow and understand a brief chapter explains how to use the database programming language sql structured query language which reads from and writes to a relational database sql is fundamental to data modeling because it helps in understanding how the model is used in addition to the relational model the last three chapters cover important modern world topics including denormalization that leads into data warehouses and bigdata database modeling the book explains how there is not much to logical data modeling in bigdata databases because as they are often schema less which means that bigdata databases do not have schemas embedded into the database itself they have no metadata and thus not much of a logical data model online bonus chapters include a case study that covers relational data modeling and are available at the author's web site oracletroubleshooter.com/datamodeling.html
