this edition contains rewritten chapters throughout with expanded coverage of symmetry and group theory and related areas such as spectroscopy and crystallography reorganized chapters on bonding coordination chemistry and organometallic chemistry are also included

our objective in compiling a series of chapters on the chemical ecology of insects has been to delineate the major concepts of this discipline the fine line between presenting a few topics in great detail or many topics in veneer has been carefully drawn such that the book

contains sufficient diversity to cover the field and a few topics in some depth after the reader has penetrated the crust of what has been learned about chemical ecology of insects the deficiencies in our understanding of this field should become evident these deficiencies to which no chapter topic is immune indicate the youthful state of chemical ecology and the need for further investigations especially those with potential for integrating elements that are presently isolated from each other at the outset of this volume it becomes evident that although we are beginning to decipher how receptor cells work virtually nothing is known of how sensory information is coded to become relevant to the insect and to control the behavior of the insect this problem is exacerbated by the state of our knowledge of how chemicals are distributed in nature especially in complex habitats and finally we have been unable to understand the significance of orientation pathways of insects in part because of the two previous problems orientation seems to depend on patterns of distribution of chemicals the coding of these patterns by the central nervous system and the generation of motor output based on the resulting motor commands

climate change is undisputed but how do we deal with carbon dioxide which is considered the scapegoat for global warming this book offers a critical look at CO_2 and its role in the current climate debate it sheds light on the influence of agriculture and forestry the importance of tree species selection in afforestation the challenges of using biogas and hydrogen and questions the role of fossil fuels you will learn how forest fires and land use affect the climate and which methods can actually help reduce CO_2 it also shows why CO_2 should be seen not only as an environmental problem but also as an essential component for life on earth a guide for anyone who wants to understand the complex relationship between CO_2 and our planet

the work of dr john auiping seeks to assist readers to differentiate observationally verified aspects of cosmology from ideas whose verification is distant or perhaps impossible such a task is performed by using a careful application of the orthodox scientific method this english edition is a part of auiping's original work especially devoted to the description of the dynamics of stars and the analysis of the big bang steady state and multiverse models from a critical point of view the author approaches different aspects of the evolution of the universe using different branches of astrophysics newtonian mechanics nuclear physics thermodynamics quantum physics and general relativity with a clear and concise narrative mathematical boxes support the deeper study of mathematical physical relations which can be omitted by readers who are not specialised
