lean is a type of organizational change brought about through improvement methods based on cost reduction mechanism the assumption is that by reducing costs the organizations can work better and more efficiently all changes in lean based organizations are directed at reducing these costs by identifying and eliminating waste the thinking is that cost reduction will increase efficiency since basically it removes process inefficiencies and decreases cycle time why are targets directed at cost reduction because costs are a crucial factor for sustainable business organization lean thinking cuts the value of scale production by looking at the existing waste in a process production remains the same but the costs of goods production are reduced due to the elimination of waste in the process as a result companies do not have to increase their production if it is not required giving companies an increase in average profits due to lean and the elimination of identified waste the focus on cost reduction can be included in the overall lean concept since cost wasting is only a part of the existing waste in other words other waste can be converted into costs or perceived as a value this book starts the mental process of organization change through lean thinking it provides the background and history of lean and then gets into how the lean process works the author also discusses why an organization should implement lean as a method to increase quality and engage workers in the process thereby increasing efficiency and ultimately profitability through case studies and examples from indonesia the author describes how to create a value stream to identify waste and discusses the concept of a pull system and its impact on the process

master s thesis from the year 2012 in the subject business economics business management corporate governance grade 1 0 durham university language english abstract the starting point for this dissertation is the assumption that implementing lean production in an operation leads to an increase in productivity enhances quality shortens lead

times and reduces costs as a result of these single improvements a superior competitive position is achieved based on a literature review that compares several approaches to define lean production a two staged concept is developed that comprises ten different practices of lean production these practices are linked with ten performance indicators which are grouped into three different perspectives shareholder cost and process perspective the assumption that the lean production practices have an impact on the performance measures is tested with a questionnaire in total 76 respondents delivered the data to test the 100 links between lean production and performance the results show that lean production implementation has a measurable impact on the performance parameters and a weaker impact on the cost perspective measures the results are supported by previous findings that show equivocal results regarding the impact on measures like return on sales

how the innate physical properties of different technologies influence the strategy and structure of the organizations implementing the technologies the sequel to design rules the power of modularity in design rules volume 2 carliss baldwin offers a comprehensive view of the digital economy by putting forth an original theory that explains how technology shapes organizations in a market economy the theory claims that complementarities arising from the physical nature of technologies can be arrayed on a spectrum ranging from strong to very weak two basic types of technologies in turn exhibit different degrees of complementarity between their internal components flow production technologies which are found in steel mills and auto factories specify a series of steps each of which is essential to the final product in contrast platform technologies which are characteristic of computer hardware software and networks are modular systems designed to provide options baldwin then investigates the dynamics of strategy for firms in platform ecosystems such firms create value by solving technical bottlenecks technical barriers to performance that arise in different parts of the system as it evolves they capture value by controlling and defending strategic bottlenecks components that are 1 essential to the functioning of some part of the system 2 unique and 3 controlled by a profit seeking enterprise strategic bottlenecks can be acquired by solving technical bottlenecks they can be destroyed via tactics such as substitution reverse engineering bypassing the bottleneck and enveloping a smaller bottleneck within a larger one strategy in platform ecosystems can thus be viewed as the
