Are you a fan of amazing Japanese puzzles? This is a puzzle book that will test you to the limits. Santotchi sandwich is a logic puzzle invented by Naoki Inaba, Japan. A rectangular or square grid contains numbers in some cells. The task is to blacken some empty cells according to the rules: all white cells must be divided into regions having the size of exactly three cells. Two black cells must not be orthogonally adjacent. Each region contains a number; a number indicates how many black cells share an edge with that region. The book comes complete with the solutions at the back, so you'll always know if you got it right or can find the solution if you are really stuck. For the answer, don't delay; get a copy today!

Ever since the advent of the intelligence test, we have thought of exceptional achievement in terms of cognitive attributes. We have words and phrases like genius, above average intelligence, average, and mentally deficient to describe different levels of cognitive ability. In the United States, widespread use of intelligence tests followed the success of the in World War I and for the next half century, Army Alpha and Beta tests. Intelligence tests were the major measures used to predict school and vocational achievement. Learning was primarily studied in laboratories and the behaviorist theories that were dominant largely dealt with changes in overt behavior. As a result, there was relatively little influence of learning research on concepts involving cognition and intelligence. The transition from behaviorism to cognitive psychology that began in the 1940s and 50s came into full flower in the 1970s and 80s, and great progress was made in understanding learning, memory, and thinking. In the decades following World War I, there had been many debates about the possible influence of environmental conditions on intelligence, but the cognitive abilities measured by intelligence tests were

generally believed to be determined by heredity the intelligence tests of cognitive abilities correlated substantially with academic performance so their use in determining which students needed special help in school or which students were capable of university work was widely accepted as cognitive psychology became dominant it became apparent that although heredity was important intelligence consisted of learnable abilities
