spatial models have been in existence in the environmental and social sciences for a long time more recently specialised software for the capture manipulation and presentation of spatial data which can be referred to as geographical information systems gis have vastly increased the range of possibilities of organising spatial data by new and efficient ways of spatial integration and spatial interpolation coupled with the improvements in data availability and increases in computer memory and speed these novel techniques give rise to new types of spatial models which exploit the technological potential now available make better use of existing data stimulate the collection of new data and open up new ways of working with geographic information this book explores the potential and impact of gis on spatial modelling

this unique book focuses on remote sensing rs and geographical information systems gis in iraq the environmental applications include monitoring and mapping soil salinity and prediction of soil properties monitoring and mapping of land threats proximal sensing for soil monitoring and soil fertility spatiotemporal land use cover agricultural drought monitoring hydrological applications including spatial rainfall distribution surface runoff and drought control geo morphometric analysis and flood simulation hydrologic and hydraulic modelling and the effective management of water resources also this book assesses the impacts of climate change on natural resources using both rs and gis as well as other applications covering different parts of iraq the book chapters include tens

of maps extracted from the remotely sensed datasets in addition to tables and statistical relations obtained from the results of the studies of the chapters authors these studies have been conducted in different parts of iraq in the north kurdistan region with its mountainous and undulating lands in western parts which have desert soils and in central and southern iraq where there are salty soils dunes wetlands and marshes the book is written by distinguished scientists from iraq china usa italy iran germany and the czech republic who are interested in the iraqi environment the book is therefore a useful source of information and knowledge on iraqi environment for graduate students researchers policy planners and stakeholders in iraq as well as similar regions

this guide takes a critical look at the theory and practices that together comprise gis it outlines the value both intellectual and technical of gis for human geographers recognizing the positive effects gis has had but also pointing out its limitations midwest
