as many as 20 to 25 percent of american adultsâ or one in every four peopleâ have been victimized by witnesses of or perpetrators of family violence in their lifetimes family violence affects more people than cancer yet it s an issue that receives far less attention surprisingly many assume that health professionals are deliberately turning a blind eye to this traumatic social problem the fact is very little is being done to educate health professionals about family violence health professionals are often the first to encounter victims of abuse and neglect and therefore they play a critical role in ensuring that victimsâ as well as perpetratorsâ get the help they need yet despite their critical role studies continue to describe a lack of education for health professionals about how to identify and treat family violence and those that have been trained often say that despite their education they feel ill equipped or lack support from by their employers to deal with a family violence victim sometimes resulting in a failure to screen for abuse during a clinical encounter equally problematic the few curricula in existence often lack systematic and rigorous evaluation this makes it difficult to say whether or not the existing curricula even works confronting chronic neglect offers recommendations such as creating education and research centers that would help raise awareness of the problem on all levels in addition it recommends ways to involve health care professionals in taking some responsibility for responding to this difficult and devastating issue perhaps even more importantly confronting chronic neglect encourages society as a whole to share responsibility health professionals alone cannot solve this complex problem responding to victims of family

violence and ultimately preventing its occurrence is a societal responsibility

in this book paul oslington underlines the contradiction between the prominence of job losses in political conflict over trade liberalization and trade economists usually working with full employment models this book is a comprehensive treatment of the benchmark competitive trade model with unemployment it highlights the important linkages between trade and employment providing analytical tools for participants in debates over trade liberalization global economy models and empirically important cases where factor price equalization fails are considered for the first time questions addressed include how do trading economies with unemployment respond to shocks such as terms of trade deteriorations changes in labour market institutions or technological change how does international migration affect employed and unemployed workers how are trade patterns and volumes modified by unemployment is trade liberalisation always gainful when there is unemployment how are european and american labour markets linked how does the entry of newly industrializing countries into manufactured goods markets affect unemployment and wages in different parts of the world what is the impact of harmonization of international labour standards on different groups in different parts of the world this work is a basis for much needed empirical and policy work on trade and unemployment it will strongly appeal to researchers students and academics with an interest in international economics and international business economists in government and international agencies will also find much to interest them within this book
