in this book the use of hybrid simulation in delivery room emergencies is described and shown the use of a patient actor combined with a task trainer within the same session substantially improve the training for practical management of intrapartum emergencies in real life reducing the risk of failure of operative vaginal delivery and of related adverse events including perinatal or maternal complications furthermore simulation with high reality computerized mannequin and scenography of emergency situation can improve technical and manual skills of the participants for this book and the related videos a new generation of mannequins suitable for both clinical manoeuvres and ultrasound examination is used to simulate all clinical scenarios of emergency that can happen in the delivery room for both the mother and the child this unique book is a useful tool for medical students residents practicing pediatricians anesthetists obstetricians and all health care professionals working in the delivery room in their ability to deal with critical

and emergency situations with safety and good medical practice

medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide simulation and skills centres have become established to integrate simulation into mainstream education in all medical nursing and paramedical fields borrowing from the experience and methodologies of industries that are using simulation medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula this book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation simulation has been used to enhance the educational experience in a diverse range of fields therefore a wide variety of disciplines are represented the book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding equipment staffing and course development and promotion section two deals with simulators and related training devices that are required to equip a stand alone or institution based centre the features strengths and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements there is a guide to producing scenarios and medical props that can enhance the training experience the third section covers adult education and it reviews the steps required to develop courses that comply with best practice in medical education teaching skills facilitating problem based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education the manual concludes with guides for the major specialties that use simulation including military paediatrics cpr and medical response teams obstetrics and anesthesia

simulations have been a fixture of aviation training for many years advances in simulator technology now enable modern flight simulation to mimic very closely the look and feel of real world flight operations in spite of this responsible researchers trainers and simulation developers should look beyond mere simulator fidelity to produce meaningful training outcomes optimal simulation training development can unquestionably benefit from knowledge and understanding of past present and future research in this topic area as a result this volume of key writings is invaluable as a reference to help guide exploration of critical research in the field by providing a mix of classic articles that stand the test of time and recent writings that illuminate current issues this volume informs a broad range of topics relevant to simulation training in aviation
