the chief focus of the book is on the symbolic and linguistic the purpose is to develop an integrated theory of architectural description and architectural intention and this includes the intention of the user as well as that of the designer insofar as architecture is an art norberg schulz is a practicing architect his buildings stand in several countries and he elucidates the nature of architectural reality with a practiced eye and from a practical viewpoint although the methods and theory that his book develops are uncompromisingly rigorous and tightly formed they are everywhere related to actual building through specific examples and through the use of over 100 photographs the structure that norberg schulz has fashioned is surely one of the most impressive intellectual edifices that any architect has ever produced the materials

that are organically worked into it include gestalt psychology the mechanics of perception information theory modern analytic philosophy and in particular linguistic analysis and the general theory of signs and symbols the result however is not an eclectic hodge podge all these materials have their place and purpose none is applied extraneously for show or purely decorative effect and all this divergent material had to be joined according to plan within formal bounds in order to produce a theory with equally divergent applications one that can treat not only of the aesthetics of architecture but equally well of its social psychological and cultural effects the chief focus of the book is on the symbolic and linguistic the purpose is to develop an integrated theory of architectural description and architectural intention and this includes the intention of the user as well as that of the designer insofar as architecture is an art

for the first time this book demonstrates that the two paradigms of architectural criticism and performance evaluation can not only co exist but complement each other in the assessment of built works as architecture takes more principled stances worldwide from environmental sustainability to social cultural and economic activism this book examines the roles of perceived and measured quality in architecture by exploring in tandem both subjective traditional architectural criticism and environmental design and performance evaluation and its objective evaluation criteria the book argues that both methodologies and outcomes can achieve a comprehensive assessment of quality in architecture curated by a global editorial team the book includes contributions from international architects and critics based in the uk usa brazil france qatar egypt new zealand china japan and germany global case studies which illustrate both perspectives addressed by the book and comparative analyses of the findings a six part organization which includes introductions and conclusions from the editors to help guide the reader and further illuminate the contributions by presenting a systematic approach to assessing building performance design professionals will learn how to improve building design and performance with major stakeholders in mind especially end users occupants

architect and architectural author herman hertzberger 1932 is internationally recognized for both his built work and his written work buildings such as centraal beheer in apeldoorn 1972 and many of apeldoorn s schools but also his publications such as lessons for students in architecture which has been translated into many languages have inspired generations of architects and students in this book hertzberger lays down the foundations of his architectural vision this book is an attempt to formulate what structuralism means in architecture and why that matters there are many misunderstandings about the concept of structuralism in general and especially where architecture is concerned there is also a renewed interest in structuralism what i see as the real structuralism in architecture is a way of thinking that has far reaching opportunities for the reuse of buildings which can give a new impulse to the discussion about sustainability in addition the possibility of users having a greater influence has revealed the blueprint for a more democratic architecture herman hertzberger exhibition the new institute rotterdam the

collaborations in architecture and engineering focuses on team building and problem solving between architects and engineers to prepare you for working together in practice it provides an overview and foundation for interdisciplinary collaboration so that you can create innovative proposals for optimization performance and aesthetic goals it also shows you how to solve real world problems and how to engage creatively with technological challenges so that you can be a productive member of any team the authors an architect and an engineer share guidelines learned from their experiences and observations on how to insure productive communication engage in interdisciplinary discussions and establish common goals and values throughout the book are many case study examples of architect and engineer collaborations such as those between sanaa and mutsuro sasaki foster partners and buro happold steven holl and guy nordenson and shop architects and arup the book also includes a discussion about integrated project delivery ipd contracts and administration so you ll be ready for better integration

structure as architecture presents a comprehensive analysis of the indispensable role of structure in architecture an exploration as well as a celebration of structure the book draws on a series of design studies and case study examples to illustrate how structure can be employed to realize a wide range of concepts in contemporary architecture by examining design principles that relate to both architecture and structural engineering andrew charleson provides new insights into the relationship between both the technical and aesthetic aspects of architecture now in its second edition the text has been extensively revised and updated throughout features include a brand new chapter on hidden structure adding to the material on exposed structures two new chapters on using structure to realise common architectural concepts through a combination of precedents and creative design over 50 new case studies from across the globe easy to understand diagrams and a highly visual design to aid understanding and accessibility more than two hundred case studies of contemporary buildings from countries such as the uk the us france germany spain hong kong australia and japan illustrate how a thorough integration of structure adds layers of richness and enhances the realisation of architectural design concepts

confabulation is a drawing together through storytelling fundamental to our perception memory and thought is the way we join fractured experiences to construct a narrative confabulations storytelling in architecture weaves together poetic ideas objects and events and returns you to everyday experiences of life through juxtapositions with dreams fantasies and hypotheticals it follows the intellectual and creative framework of architectural cosmopoesis developed and practiced by the distinguished thinker architect and professor dr marco frascari who thought deeply about the role of storytelling in architecture bringing together a collection of 24 essays from a diverse and respected group of scholars this book presents the convergence of architecture and storytelling across a broad temporal geographic and cultural range beginning with an introduction framing the topic the

book is organized along a continuous thread structured around four key areas architecture of stories stories of architecture stories of theory and practice of stories beautifully illustrated throughout and including a 64 page full colour section confabulations is an insightful investigation into architectural narratives

a survey of the built environment distills the work of legendary author and illustrator francis d k ching into a single volume introduction to architecture presents the essential texts and drawings of francis d k ching for those new to architecture and design with his typical highly graphic approach this is the first introductory text from ching that surveys the design of spaces buildings and cities in an easy to understand format readers will explore the histories and theories of architecture design elements and process and the technical aspects of the contemporary profession of architecture the book explains the experience and practice of architecture and allied disciplines for future professionals while those who love the beauty of architecture drawing will delight in the gorgeous illustrations included overview of the issues and practices of architecture in an all in one introductory text includes new chapters and introductory essays by james eckler and features more than 1 000 drawings throughout professor ching is the bestselling author of numerous books on architecture and design all published by wiley his works have been translated into 16 languages and are regarded as classics for their renowned graphical presentation for those pursuing a career in architecture or anyone who loves architectural design and drawing introduction to architecture presents a beautifully illustrated and comprehensive guide to the subject

this book provides an in depth exploration of the rich and persistent use of analogical thinking in the built environment since the turn of the 21st century design thinking has permeated many fields outside of the design disciplines it is expected to succeed whenever disciplinary boundaries need to be transcended in order to think outside the box this book argues that these qualities have long been supported by analogical thinking an agile way of reasoning in which think the unknown through the familiar the book is organized into four case studies the first reviews analogical models that have been at the heart of design thinking representations from the 1960s to the present day the second investigates the staying power of biological analogies the third explores the paradoxical imaginary of analogous cities as a means of integrating contemporary architecture with heritage contexts while the fourth unpacks the critical and theoretical potential of linguistic metaphors and visual comparisons in architectural discourse comparing views on the role of analogies and metaphors by prominent voices in architecture and related disciplines from the 17th century to the present the book shows how the analogical world of the project is revealed as a wide open field of creative and cognitive interactions these visual and textual operations are explained through 36 analogical plates which can be read as an inter text demonstrating how analogy has the power to reconcile design and theories

excerpt from studies in architecture the following essays are connected rather by the method of treatment attempted than by subject architecture is a difficult art and it is

less popular in England than in other countries the reason is I believe that writers have dealt with architecture either as an affair of dates and technicalities or as a vehicle for moral disquisition the first method has little interest for the layman and the latter none at all for the artist the result has been that architecture considered as an art has dropped out of the main stream of educated thought and has lost touch of that intelligent interest which is freely accorded to the sister arts the problem for the critic is I think to find in architecture the personal equation of the architect to read his personality in his works and to find a clue to his works in his personality after all the vital interest of architecture is the human interest not merely the reflection of social habit in buildings but that play of personal temperament which is as clearly traceable in the works of architects as it is in those of painters and sculptors it is to this point that I have addressed myself in the following essays about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

diversity in architecture intersectionality affective politics and creating change explores diversity in architecture through an intersectional lens it examines how overlapping individual identities cultural ideologies and institutional practices shape the profession divided into two parts this book first explores how values norms and ideologies are constructed circulated and reinforced through media representations both from without and from within the second leans into voices from academics and architects within spaces of education and practice who share their lived experiences navigating power structures and affective politics that marginalise diverse voices considering praxis and actions to create change where care is central it asks what happens if we bring intersectionality to the picture of diversity in architecture through media education practice how can affective solidarity and relationality foster change what role does intersectional care play in dismantling systemic barriers and reimagining a more inclusive future written in dialogue with and for architectural academics practitioners students as well as wider audiences invested in diversity this book opens its readers to the importance of mobilising diversity in architecture through intersectionality and affect towards lasting change

precedents in architecture a timely update of the architectural classic on design analysis precedents in architecture fourth edition provides a vocabulary for architectural analysis that illuminates the works of leading architects and aids architects and designers in creating their own designs thirty eight leading architects are represented in this updated edition through an analysis of more than 100 buildings that are assessed using a diagrammatic technique applicable to any building this impressive collection includes fourteen new buildings and seven new

innovative architects distinguished by the strength quality and interest of their designs it delivers valuable guidance in analyzing architectural history as an evolutionary process by exploring the commonality of design ideas reflected in a broad range of structures by internationally renowned architects both novices and seasoned professionals will find precedents in architecture fourth edition to be a very useful tool for enriching their design vocabulary and for the ongoing assessment of buildings found in today's evolving landscape

today the excitement in architecture derives from the tension between the need for privacy and the impulse toward community this unique survey of buildings and interiors captures the multilayered experience that is engaged whenever we look out of or into a work of architecture immaterial world examines the built environment as a reflection of the terrors and pleasures of exposure information overload and abundance of every sort twenty five projects from around the world by such well known architects as diller scofidio renfro morphosis christian de portzamparc renzo piano and many others are presented these works range from complete transparency to bunkerlike opacity depending upon who's doing the looking and who or what is being seen

pulsation in architecture highlights the role of digital design as the catalyst for a new spatial sensibility related to rhythmic perception it proposes a novel critical reception of computational architecture based on the ability of digital design to move beyond mere instrumentality and to engage with core aspects of the discipline the generative engine of digital architecture reinvigorates a discourse of part to whole relationships through the lens of rhythmic affect there is a paradigm shift in spatial perception due to the intense use of computational techniques and the capacity to morph massive amounts of data in spatial patterns rhythm plays a pivotal role in the articulation of the topology of buildings generating the atmospheric character that induces moods and throbbing sensations in space pulsation introduces the fundamental animate capacity of living form and reshapes our perception of architectural space across the multiple scales of a project from digital inception to fabrication an emerging thread of rhythmic sensibility loosely binds a survey of contemporary design practices including contributions by peter eisenman jeff kipnis greg lynn unstudio preston scott cohen reiser umemoto asymptote ali rahim hernan diaz alonso ruy klein gage clemenceau nox evan douglis studio kokkugia and monad studio

in an era of brash expensive provocative new buildings a prominent critic argues that emotions such as hope power sex and our changing relationship to the idea of home are the most powerful force behind architecture yesterday and especially today we are living in the most dramatic period in architectural history in more than half a century a time when cityscapes are being redrawn on a yearly basis architects are testing the very idea of what a building is and whole cities are being invented overnight in exotic locales or here in the united states now in a bold and wide ranging new work rowan moore former director of the architecture foundation now the architecture critic for the observer explores the reasons behind these changes in our

built environment and how they in turn are changing the way we live in the world taking as his starting point dramatic examples such as the high line in new york city and the outrageous island experiment of dubai moore then reaches far and wide back in time to explore the covent garden brothels of eighteenth century london and the fetishistic minimalism of adolf loos across the world to assess a software magnate s grandiose mansion in atlanta and daniel libeskind s failed design for the world trade center site and finally to the deeply naturalistic work of lina bo bardi whom he celebrates as the most underrated architect of the modern era

what is a threshold space a prelude an intermediate space a barrier inside or outside the threshold space is all of these usually even at the same time he lives on the spatial ambivalence between opening and closing and at the same time creates the expectation of what is to come till boettger has dealt in teaching and research projects closely with the architectural staging of arrival and reception his book is a collection of exemplary phenomenological analyzes of spatial transitions in historical and modern cultural buildings by renowned architects it also develops a methodology to optimize threshold rooms in all construction projects in addition to a balance that can generate an exciting space there is also primarily the temporal sequence of experiencing determining threshold spaces are shown here in their role as a spatial agent they receive and bid farewell

call to order the first in a series of books to be produced by the university of miami school of architecture is inspired by rappel l ordre the post wwi european art movement that rejected the extreme tenants of the avant garde and its praise of machinery violence and war in favor of a renewed interest in tradition call to order suggests a re grouping and a re grounding upon the foundations of the discipline and examines an international group of architects who are ostensibly rehearsing the ethos of the neo rationalist movement when architects and thinkers converged in their resistance to what they saw as an erosion of the discipline by behaviorism and the social sciences call to order frames and examines similar resistant practices in the contemporary architectural scene and in the context of a long historical trajectory to tease out and articulate a cultural project that is relevant to the ongoing architectural debate
