neuroscience has made considerable progress in figuring out how the brain works we know much about the molecular genetic and biochemical underpinnings of sensory and motor functions recent neuroimaging work has opened the door to investigating the neural

underpinnings of higher order cognitive functions such as memory attention and even free will in these types of investigations researchers apply specific stimuli to induce neural activity in the brain and look for the function in question however there may be more to the brain and its neuronal states than the changes in activity we induce by applying particular external stimuli in volume 2 of unlocking the brain georg northoff addresses consciousness by hypothesizing about the relationship between particular neuronal mechanisms and the various phenomenal features of consciousness northoff puts consciousness in the context of the resting state of the brain thereby delivering a new point of view to the debate that permits very interesting insights into the nature of consciousness moreover he describes and discusses detailed findings from different branches of neuroscience including single cell data animal data human imaging data and psychiatric findings this yields a unique and novel picture of the brain and will have a major and lasting impact on neuroscientists working in neuroscience psychiatry and related fields
