the text book is arranged so that it can be used for self study by the engineering in practice included are as many examples of feedback control system in various areas of practice while maintaining a strong basic feedback control text

that can be used for study in any of the various branches of engineering

this book deals with a series of topics on the cutting edge of nonlinear science striking a balance between theory and experiment it consists of two innovative introductory presentations on dynamical systems and fluid dynamics and six chapters on advanced research a nontrivial interrelation between the different topics becomes apparent throughout the book as an indication of the underlying unity and genericity of nonlinear phenomena there is a continuous emphasis on conceptual issues often introduced via concrete examples a common feature is that most of the systems under study are extended nonhomogeneous and far from equilibrium the book also exhibits an interesting interplay between deterministic and stochastic approaches

this book along with its companion volume nonlinear dynamics new directions theoretical aspects covers topics ranging from fractal analysis to very specific applications of the theory of dynamical systems to biology this second volume contains mostly new applications of the theory of dynamical systems to both engineering and biology the first volume is devoted to fundamental aspects and includes a number of important new contributions as well as some review articles that emphasize new development prospects the topics addressed in the two volumes include a rigorous treatment of fluctuations in dynamical systems topics in fractal analysis studies of the transient dynamics in biological networks synchronization in lasers and control of chaotic systems among others this book also develops applications of nonlinear dynamics on a diversity of topics such as patterns of synchrony in neuronal networks laser synchronization control of chaotic systems and the study of transient dynamics in biological includes a study of self organized regularity in long range systems explains use of levenstein s distance for measuring lexical evolution rates
