achieve any cost goals in half the time and achieve stable production with quality designed in right the first time design for manufacturability how to use concurrent engineering to rapidly develop low cost high quality products for lean production is still the definitive work on dfm this second edition extends the proven methodology to the most advanced product development process with the addition of the following new unique and original topics which have never been addressed previously these topics show you how to cut cost from 1 2 to 1 10 in 9 categories with ways to remove that much cost from product charges and pricing commercialize innovation starting with manufacturable research and learning from the new section on scalability you will learn how to design products and processing equipment to quickly scale up to any needed demand or desired growth design product families that can be built on demand in platform cells that also mass customize products to order make lean production easier to implement with much more effective results while making build to order practical with spontaneous supply chains and eliminating forecasted inventory by including an updated chapter on designing products for lean production the author s 30 years of experience teaching companies dfm based on pre class surveys and plant tours is the foundation of this most advanced design process it includes incorporating dozens of proven dfm guidelines through up front concurrent engineering teamwork that cuts the time to stable production in half and curtails change orders for ramps rework redesign substituting cheaper parts change orders to fix the changes unstable design specs part obsolescence and late discovery of manufacturability issues at periodic design reviews this second edition is for the whole product development community including engineers who want to learn the most advanced dfm techniques managers who want to lead the most advanced product development project team leaders who want to immediately apply all the principles taught in this book in their own micro climate improvement leaders and champions who want to implement the above and ensure that the company can design products and versatile processing equipment for low volume high mix product varieties designing half to a tenth of cost categories can avoid substituting cheap parts which degrades quality and encourages standardization and spontaneous supply chains which will encourage lean initiatives using cellular manufacturing to shift production between lines for mixed production of platforms and build to order to offer the fastest order fulfillment can beat any competitors delivery time

this joint ista and fao handbook provides comprehensive guidelines for the setting up and managing of seed testing laboratories including those that cater to small and medium scale seed enterprises and farmers cooperatives which operate in low input production systems the adherence to the guidelines by seed testing laboratories results in the use of uniform procedures across the board thereby facilitating inter laboratory transferability of data this harmonization enhances confidence in seed quality assurance mechanisms the publication is an update of a previous one that was also jointly published by both organizations in 1969 and revised in 1979 and 1983 its utility is enhanced by a set of new up to date information that builds upon existing data the handbook provides guidance on the range of seed testing equipment procedures and management systems that have become available in the several decades since the previous editions seed testing is a critical component of the seed value chain and is essential for the production of quality seeds i e seeds that are alive can germinate and produce vigorous seedlings are healthy and come from lots that meet set thresholds for genetic and analytical purity the handbook covers all aspects of seed testing from laboratory design and equipment selection to sample preparation testing methods and data analysis importantly the publication also addresses the challenges of testing seeds in low input systems and provides guidance on how to adapt procedures to these settings therefore it serves as a reference material and training resource for everyone involved in seed quality assurance procedures in particular the personnel of seed testing laboratories and regulatory agencies seed producers and farmers the updated publication represents a significant improvement over previous guidelines as it incorporates advances in technology and provides guidance on a broader range of testing procedures the guidelines are designed to be adaptable to different contexts and seed types and include recommendations for quality management systems proficiency testing and inter laboratory comparisons which are essential for ensuring the accuracy and reliability of seed testing results
