this book is the third proceedings of the southeastern lie theory workshop series covering years 2015 21 during this time five workshops on different aspects of lie theory were held at north carolina state university in october 2015 university of virginia in may 2016 university of georgia in june 2018 louisiana state university in may 2019 and college of charleston in october 2021 some of the articles by experts in the field describe recent developments while others include new results in categorical combinatorial and geometric representation theory of algebraic groups lie super algebras and quantum groups as well as on some related topics the survey articles will be beneficial to junior researchers this book will be useful to any researcher working in lie theory and related areas

this monograph initiates a theory of new categorical structures that generalize the simplicial segal property to higher dimensions the authors introduce the notion of a  $d$  segal space which is a simplicial space satisfying locality conditions related to triangulations of  $d$  dimensional cyclic polytopes focus here is on the 2 dimensional case many important constructions are shown to exhibit the 2 segal property including waldhausen's construction hecke waldhausen constructions and configuration spaces of flags the relevance of 2 segal spaces in the study of hall and hecke algebras is discussed higher segal spaces marks the beginning of a program to systematically study  $d$  segal spaces in all dimensions  $d$  the elementary formulation of 2 segal spaces in the opening chapters is accessible to readers with a basic background in homotopy theory a chapter on bousfield localizations provides a transition to the general theory formulated in terms of combinatorial model categories that features in the main part of the book numerous examples throughout assist readers entering this exciting field to move toward active research established researchers in the area will appreciate this work as a reference
