This third and final volume in our mathematics for engineers series serves as a companion text to the third semester mathematics preliminaries for students and lecturers in electrical engineering and other engineering disciplines. Ordinary and partial differential equations play a central role in graduate engineering courses. This topic is one of the main focus of the third volume. In addition to describing engineering problems using differential equations, we analyze signals produced by oscillations and vibrations. This requires frequency analysis of the signals which leads to the topic of Fourier series for periodic signals and Fourier transform for non-periodic signals. This volume provides students at universities and colleges with a vivid presentation of these topics as a practical aid to higher mathematics. Mathematical terms are clearly motivated, systematically equated and visualized in many animations. A large number of examples and applications illustrate and deepen the material and the numerous exercises with solutions on the book's homepage make it easier to prepare for exams.

This invaluable volume set of advances in geosciences continues the excellent tradition of the Asia Oceania scientific community in providing the most up-to-date research results on a wide range of geosciences and environmental science. The information is vital to the understanding of the effects of climate change, extreme weathers on the most populated regions and fastest moving economies in the world. Besides these volumes also highlight original papers from many prestigious research institutions which are conducting cutting edge studies in atmospheric physics, hydrological science and water resource, ocean science and coastal study, planetary exploration and solar system science, seismology, tsunamis, upper atmospheric physics and space science.

Transitioning towards a more sustainable world is currently a central topic receiving a lot of attention as a result. Transitions are becoming key objects and the drivers of exchanges, communications and controversy in modern society. This book examines the tensions and controversies surrounding the energy, ecological and social transitions currently underway and it draws on tools developed in the humanities and social sciences. In particular, the information and communication sciences. The various case studies gathered here, written by leading experts in environmental communication, examine a wide range of topics they explore transitions in a number of different fields from agriculture to territorial policies and from online and media

communication to mechanisms for citizen participation transitions in tension features a wealth of original observations and approaches enabling readers to fully comprehend the range of controversies and issues facing our society

this book has as main aim to be an introductory textbook of applied knowledge in numerical weather prediction nwp which is a method of weather forecasting that employs a set of equations that describe the flow of fluids translated into computer code combined with parameterizations of other processes applied on a specific domain and integrated in the basis of initial and domain boundary conditions current weather observations serve as input to the numerical computer models through a process called data assimilation to produce atmospheric properties in the future e.g. temperature precipitation and a lot of other meteorological parameters various case studies will be also presented and analyzed through this book

living experience design the design of life experiences is an extension of user experience design uxd the context comprises usage and practice in real contexts in which spatial urban social temporal historical and legal dimensions are considered reflecting upon livxd is to examine the whole experience of a target audience in a variety of situations and not only in those involving digital technology this book begins with the definition of livxd and its associated epistemology and proceeds to detail field experiments in certain privileged areas the relation to creation and works mediation and adult education

sustainable enterprise performance details a method for evaluating an enterprise's readiness and progress toward sustainable performance through a comprehensive set of qualitative and quantitative indicators these indicators cover enterprise strategy for meeting both the impact of the enterprise within the framework of corporate social responsibility and the expectations of stakeholders evolving and monitoring the product and service offerings and business processes the second half of the book focuses more closely on fundamental determinants of performance such as digital transformation and artificial intelligence corporate culture ethics and compliance branding and e-reputation and best practice lean management and provides practical measures against which companies may assess the maturity of their sustainable performance

the use of digital technology in our societies is growing to meet the ever increasing challenges of data

collection raising awareness education and understanding nature artificial intelligence for example appears to be the answer to collecting massive amounts of data on biodiversity at a global scale and facilitating citizen participation in such data collection linking with nature in the digital age explores the reconfiguration of our relationship with nature within this digital framework this book examines this mediated linking from three angles firstly it shows how digital technology can foster the development of links to nature then it describes in greater detail the materiality of these links and how they have evolved with the developments in information technology finally it questions the belief in the digital as a facilitator and opens up new perspectives on our relationship with nature and the living world
