cement is the key to construction activity which generates one of the highest employments per unit of investment in india cement production has grown from 2 2 m t in 1950 51 to 53 6 m t in 1991 92 and country now occupies the fifth position in the world both as regards cement production and consumption the growth of the cement industry was very slow till 1981 due to rigid price and distribution controls in operation since independence though retention prices on paper provided for fixed and variable costs plus a reasonable return on capital in practice the targeted profits were seldom realized and there were even losses due to underutilizations inefficiencies and uncompensated cost escalations it is only after partial decontrol in 1982 that the industry s production and profitability got a boost cement supply overtook the demand during 1988 89 no wonder the government found it appropriate to decontrol cement prices w e f march 1 1989 though an informal governmental influence on prices and distribution still prevails the period of 1990 91 and the first half of 1991 92 had been by far the best for the cement industry in terms of production and profitability profits during this period marked a disproportionate increase attracting mrtp enquiry against carteling and creation of artificial shortages in addition a squeeze in governmental purchases which account for one third to two fifth of the total cement demand is exercising a dampening influence on prices and profits since mid 1991 92 though the long term prospects are encouraging due to expanding domestic and foreign demand however this requires that the profitability of the industry must be based on higher capacity utilisation cost economics in energy use through technological upgradation efficiency in packaging and handling and improvement in infrastructural support rather than profiteering these issues relating to the cement industry have been discussed and analysed in the book with the help of more than a hundred statistical tables and 22 appendices

cement is one of the most basic building materials in the global construction industry nevertheless although it occupies an important role in construction its characteristics in the global sense are still relatively unknown the findings in this book reveal for example that the manufacture of cement is predominantly capital intensive that the production and distribution of cement is a highly vertically integrated trade that the major cement producers resort to large scale price cutting when there are production surpluses that geographical affinity can determine the flow of the global cement trade and that the global demand for cement is erratic and more

this paper presents findings from a study of the cement industries in france germany italy and the united kingdom its purpose is to determine as far as is possible the extent to which the structure and performance of each industry has been influenced by the control of the market exercised by public authorities by the industries themselves or by both acting together the cement industry was chosen for its relative simplicity and because it offers a good sample of different public policy approaches to the regulation of private markets although there are numerous major factors complicating international comparison the industry is simple to analyse because it has a relatively homogeneous product derived from very spread out raw materials and it uses easily acquired technology to the diffusion of which there are no barriers the different national industries discussed all had a similar history of private regulation of the market for the first half of the 20th century during which time cartels proliferated except when they occasionally collapsed under the pressure of price cutting stimulated by excess capacity since the second world war however governments have differed in their approach to market regulation and the four country studies illustrate a range of different approaches which covers the french experience of strict price control as an instrument of industrial policy the italian experience of weaker price control a legal cartel in the u k

cement is the basis of the building and construction industry and of fundamental importance for many civil engineering applications as such the cement industry is one of the key industries worldwide necessary for the current and future sustainable development of society despite its undisputed importance the cement industry is one of those industrial branches predominately responsible for high energy consumption and excessive generation of large amounts of carbon dioxide and other contaminants that significantly endanger human health and the environment and contributes to global warming in this context nanomaterials polymeric materials and natural additives are being used for cement enhancement in various applications this book examines these novel materials and their optimization characterization and sustainable application in the building industry and for stabilizing hazardous waste
