explores the development of the ideas of evolutionary biology particularly as affected by the increasing understanding of genetics and of the chemical basis of inheritance

elinor ostrom s nobel prize winning work on common pool property rights has implications for some of the most pressing sustainability issues of the twenty first century from tackling climate change to maintaining cyberspace in this book derek wall critically examines ostrom s work while also exploring the following questions is it possible to combine insights rooted in methodological individualism with a theory that stresses collectivist solutions is ostrom s emphasis on largely local solutions to climate change relevant to a crisis propelled by global factors this volume situates her ideas in terms of the constitutional analysis of her partner vincent ostrom and wider institutional economics it outlines her key concerns including a radical research methodology commitment to indigenous people and the concept of social ecological

systems ostrom is recognised for producing a body of work which demonstrates how people can construct rules that allow them to exploit the environment in an ecologically sustainable way without the need for governmental regulation and this book argues that in a world where ecological realities increasingly threaten material prosperity such scholarship provides a way of thinking about how humanity can create truly sustainable development given the inter disciplinary nature of ostrom s work this book will be relevant to those working in the areas of environmental economics political economy political science and ecology

studies in the babi and baha i religions volume 12this is the first and only serious academic treatment of the subject of evolution in the teachings of the bahá í faith the authors provide an exhaustive discussion of the historical context of abdu l bahá s remarks on and objections to the darwinian theories of his time presenting modern alternatives to contemporary interpretations of his remarkskeven brown s essay investigates the religious controversy that has surrounded the subject of evolution both within christianity and within islam during abdu l bahá s time he provides a valuable summary of the views of those the master called the philosophers of the east then from the perspective of modern science eberhard von kitzing discusses the impact of evolution on the study of biology and suggests that abdu l bahá s teachings have been widely misunderstood this book will expand and deepen discussion on evolution in the bahá í community

anthropology and by extension archaeology has had a long standing interest in evolution in one or several of its various guises pick up any lengthy treatise on humankind

written in the last quarter of the nineteenth century and the chances are good that the word evolution will appear somewhere in the text if for some reason the word itself is absent the odds are excellent that at least the concept of change over time will have a central role in the discussion after one of the preeminent and often vilified social scientists of the nineteenth century herbert spencer popularized the term in the 1850s evolution became more or less a household word usually being used synonymously with change albeit change over extended periods of time later through the writings of edward burnett taylor lewis henry morgan and others the notion of evolution as it applies to stages of social and political development assumed a prominent position in anthropological discussions to those with only a passing knowledge of american anthropology it often appears that evolutionism in the early twentieth century went into a decline at the hands of franz boas and those of similar outlook often termed particularists however it was not evolutionism that was under attack but rather comparativism an approach that used the ethnographic present as a key to understanding how and why past peoples lived the way they did boas 1896

uncommonly good makes a compelling case that intellectual curiosity not only changed europe but launched modernity cleveland plain dealer when columbus first returned to spain from the caribbean he dazzled king ferninand and queen isabella with exotic parrots tropical flowers and bits of gold inspired by the promise of riches countless seafarers poured out of the iberian peninsula and wider europe in search of spices treasure and land many returned with strange tales of the new world curiosity began to percolate through europe as the new world's people animals and plants ruptured prior assumptions about the biblical description of creation the church long fearful of challenges to its authority could no longer suppress the mantra dare to know noblemen began collecting cabinets of curiosities soon others went from collecting to examining natural objects with fresh eyes observation led to experiments competing conclusions triggered debates the foundations for the natural sciences were laid as questions became more multifaceted and answers became more complex carl linnaeus developed a classification system and sent students around the globe looking for specimens museums botanical gardens and philosophical societies turned their attention to nature national governments undertook explorations of the pacific eminent historian joyce appleby vividly recounts the explorers triumphs and mishaps including magellan's violent death in the philippines the miserable trek of the new argonauts across the andes on their mission to determine the true shape of the earth and how two brilliant scientists alexander humboldt and charles darwin traveled to the americas for evidence to confirm their hypotheses about the earth and its inhabitants drawing on detailed eyewitness accounts appleby also tells of the turmoil created in the all societies touched by the explorations this sweeping global story imbues the age of discovery with fresh meaning elegantly charting its stimulation of the natural sciences which ultimately propelled western europe toward modernity

the biological bases of human behavior accomplishes what numerous introductory textbooks have failed to do present an evolutionary explanation of why it is we do what we do this comprehensive text brings together a diverse number of traditionally separate disciplines including paleoanthropology psychology and sociology in its attempt to understand human traits rich in controversial topics this text integrates subjects such as paleontology speech the structure of the brain eve and the rather odd way in which humans reproduce written as a narrative this excellent learning tool relates modern behavior to the past environments stresses and challenges still evident in the modern human world

in fiction rivals science allen thiher describes the epistemic rivalry that the major nineteenth century french novelists felt in dealing with science after brief considerations of stendhal thiher focuses on the four most important realist novelists in france balzac flaubert zola and going into the twentieth century proust according to thiher each of these novelists considered himself to be in competition with science to make the novel an instrument for knowledge the first chapter sets forth the understanding of science that dominated the early nineteenth century in order to make it plausible that literary minds throughout the nineteenth century thought that they could not only rival science but even make positive contributions to knowledge the newtonian paradigm that had dominated the enlightenment was slowly being challenged by new developments both in physics and in nonphysical sciences such as biology especially in biology the development of a scientific discourse using narrative temporality favored the idea that novelists could also use fiction to construct discourses that advanced knowledge balzac wanted to construct a natural history of society and correct the chemical theory of his time flaubert drew upon medicine and physiology for the rhetoric of his realist fiction zola used unsuccessful medical paradigms for his doctrine of heredity and models drawn from thermodynamics to describe the relation of the individual to societal forces finally proust drew upon thinkers such as poincar to elaborate an epistemology that put an end to the rivalry novelists might feel with scientists proust located certain knowledge within the realm of human subjectivity while granting the power of laws to rule over the contingent realm of physical reality in which after poincar neither mathematics nor newton was any longer a source of absolute certainty proust s novel is thus the last great realist work of the nineteenth century and the first modernist work of consciousness taking itself as the object of knowledge by demonstrating that the great french realist novelists dealt with many of the same problems as did the scientists of the nineteenth century fiction rivals science attempts to show how culture unites literary and scientific inquiry into knowledge providing a new interpretation of the development of literary realism this important new work will be welcomed not only by literary scholars but by historians of science and culture as well

michael ruse is one of the foremost charles darwin scholars of our time for forty years he has written extensively on darwin the scientific revolution that his work precipitated and the nature and implications of evolutionary thinking for today now in the year marking the two hundredth anniversary of darwin s birth and the one hundred fiftieth anniversary of his masterpiece on the origin of species ruse reevaluates the legacy of darwin in this collection of new and recent essays beginning with pre darwinian concepts of organic origins proposed by the great german philosopher immanuel kant ruse shows the challenges that darwin s radically different idea faced he then discusses natural selection as a powerful metaphor alfred russel wallace the co discoverer of the theory of evolution herbert spencer s contribution to evolutionary biology the synthesis of mendelian genetics and natural selection the different views of julian huxley and george gaylord simpson on evolutionary ethics and the influence of darwin s ideas on literature in the final section ruse brings the discussion up to date with a consideration of evolutionary development dubbed evo devo as a new evolutionary paradigm and the effects of darwin on religion especially the debate surrounding intelligent design theory ruse offers a fresh perspective on topics old and new challenging the reader to think again about the nature and consequences of what has been described as the biggest idea ever conceived
