the aim of this book volume is to explain the importance of markov state models to molecular simulation how they work and how they can be applied to a range of problems the markov state model msm approach aims to address two key challenges of molecular simulation 1 how to reach long timescales using short simulations of detailed molecular models 2 how to systematically gain insight from the resulting sea of data msms do this by providing a compact representation of the vast conformational space available to biomolecules by decomposing it into states sets of rapidly interconverting conformations and the rates of transitioning between states this kinetic definition allows one to easily vary the temporal and spatial resolution of an msm from high resolution models capable of quantitative agreement with or prediction of experiment to low resolution models that facilitate understanding additionally msms facilitate the calculation of quantities that are difficult to obtain from more direct md

analyses such as the ensemble of transition pathways this book introduces the mathematical foundations of markov models how they can be used to analyze simulations and drive efficient simulations and some of the insights these models have yielded in a variety of applications of molecular simulation

for years reducing the number of traffic related fatalities and injuries has been a major problem throughout the world today it has gained much more momentum in view of rapidly increasing suv van and light truck populations relative to the number of passenger cars and due to significant improvements in technologies that facilitate a better understanding of the interaction dynamics among widely differing size vehicles unless disparities in crashworthiness among vehicles of different masses sizes and structural characteristics in mixed crash environments are successfully taken into account the challenge toward improved vehicle safety will continue this two part compendium provides the most comprehensive information available on the entire spectrum of vehicle crash compatibility the first part presents oral comments captured from the 2003 sae world congress panel discussion on compatibility the panel of leading experts representing industry academia and government provides a rough framework and a broad range of views on current and emerging developments in compatibility research the second part of this compendium features 44 best technical papers from sae international and the international technical conference on the enhanced safety of vehicles published from the early 1970s through 2004 readers will get a feel for the direction passenger car and heavy vehicle manufacturers research institutions infrastructure suppliers insurers and governments are taking to reduce the number of traffic fatalities and injuries
