this book comprises the conferences and discussions presented at the 4th symposium on the search for the causes of schizophrenia which took place in Guarujá, Brazil, November 1998. This series of symposia started in 1986 on the occasion of the 600th anniversary of the University of Heidelberg, followed by two others in 1989 and 1993. From these meetings resulted three volumes that have been widely used as a reference for comprehensive reviews on the state of the art in schizophrenia research. They reflect the progress resulting from the most relevant studies on the etiology of the disease. The spirit of the 4th search for the causes remains the same. Again we gathered some of the most prominent researchers on schizophrenia to contribute not only with their own data but also summing up the state of the art and the perspectives in their areas of work. The topics covered in 6 parts are epidemiology, risk factors and antecedents, genetics, neuropathology and neurochemistry, brain imaging and function, and treatment and rehabilitation. In this 4th volume were introduced in each topic a chapter on the balance of the century to summarize what did we learn and what we did not in the last 100 years of schizophrenia research. We hope that this volume can help us to see how far we are in the search for the causes of schizophrenia and how much further we still have to go before our problem can be solved.

this doctoral thesis focuses on the search for new phenomena in top-antitop quark $t\bar{t}$ final states with additional b-quark jets at the LHC. It uses the full Run 1 dataset collected by the ATLAS experiment in proton-proton collisions at $\sqrt{s} = 8$ TeV. The final state of interest consists of an isolated lepton, a neutrino, and at least six jets with at least four b-tagged jets, a challenging experimental signature owing to the large background from $t\bar{t}$ heavy flavor production. This final state is characteristic of $t\bar{t}h$ production with the Higgs boson decaying into $b\bar{b}$, a process that allows direct probing of the top-Higgs Yukawa coupling. This signature is also present in many extensions of the Standard Model that have been proposed as solutions to the hierarchy problem, such as supersymmetry or composite Higgs models, which predict the pair production of bosonic or fermionic top quark partners or the anomalous production of four top quark events. All these physics processes have been searched for using an ambitious search strategy that has been developed on the basis of a combination of state-of-the-art theoretical predictions and a sophisticated statistical analysis to constrain in situ the large background uncertainties. As a result, the most restrictive bounds to date on the above physics processes have been obtained.

Corporate CEOs are headline news: stock prices rise and fall at word of their hiring and firing. Yet we know surprisingly little about how CEOs are selected and dismissed or about their true power. This text takes us into

the often secretive world of the ceo selection process

at long last james madison has his memorial on capitol hill and in this grand library building as the bicentennial of the framing of our constitution approaches here we provide monumental evidence that our nation has not forgotten the chief architect and advocate of our still vital constitution historians will probably agree that james madison was less effective as a politician than as a statesman a scholar and a political philosopher if the politician must have his eye on the next election and the statesman on the next generation this library invigorated by the quiet scholarly spirit of madison can remind us of the vistas of the past and future generations foreword
