this volume addresses the latest state of the art systems biology oriented approaches that driven by big data and bioinformatics are utilized by computational systems biology an interdisciplinary field that bridges experimental tools with computational tools to tackle complex questions at the frontiers of knowledge in medicine and biotechnology the chapters in this book are organized into six parts systems biology of the genome epigenome and redox proteome metabolic networks aging and longevity systems biology of diseases spatiotemporal patterns of rhythms morphogenesis and complex dynamics and genome scale metabolic modeling in biotechnology in every chapter readers will find varied methodological approaches applied at different levels from molecular cellular organ to organisms genome to phenome and health and disease written in the highly successful methods in molecular biology series format chapters include

introductions to their respective topics criteria utilized for applying specific methodologies lists of the necessary materials reagents software databases algorithms mathematical models and dedicated analytical procedures step by step readily reproducible laboratory bioinformatics and computational protocols all delivered in didactic and clear style and abundantly illustrated with express case studies and tutorials and tips on troubleshooting and advice for achieving reproducibility while avoiding mistakes and misinterpretations the overarching goal driving this volume is to excite the expert and stimulate the newcomer to the field of computational systems biology cutting edge and authoritative computational systems biology in medicine and biotechnology methods and protocols is a valuable resource for pre and post graduate students in medicine and biotechnology and in diverse areas ranging from microbiology to cellular and organismal biology as well as computational and experimental biologists and researchers interested in utilizing comprehensive systems biology oriented methods

treatment of glioma is currently one of the most challenging problems in oncology as well as in neurosurgery despite major advances in our understanding of the pathomechanism diagnosis by imaging and the availability of powerful therapeutic tools the life expectancy of patients with glioblastoma has only been slightly prolonged and a cure remains elusive none of the currently available surgical tools including operative microscopes lasers and image guided surgery can enable the detection and removal of all of the tumor tissue in recent years however the landscape has been changing immeasurably and molecular studies over the past two decades have identified a variety of genetic aberrations that are specifically associated with individual types of gliomas in addition certain molecular abnormalities have been linked to therapy responses thereby establishing clinical biomarkers and molecular targets and the use of novel agents is being investigated these agents have been specifically engineered to exert specific cytotoxicity against gliomas either on their own as single agents or in combination with other modalities moreover there has been an enormous surge of interest in the area of immunology and immunotherapy which has been facilitated by our understanding of the molecular basis of gliomas although several kinds of immunotherapeutic trials have been undertaken we still await a great breakthrough in terms of clinical efficacy to prolong the survival time of glioma patients
