environmental decision making is like politics mostly local in fact making decisions about the environment at the

subnational level in state regional and local jurisdictions is a lot like politics for resolving environmental issues demands but often resists a balance between deeply held feelings and stark confrontations among opposing views this volume describes tools that should make the decision maker's lot a bit more tolerable the authors would be the last to suggest that these decision aiding tools will somehow bring a benign order to issues that reach to people's fundamental values what they can help do is to keep the debate focused on the important issues to serve up useful options and to narrow the range of disagreement even this is a challenging assignment still why bother the chief reason is that the locus of environmental decision making has in the past decade or so shifted from the national to the subnational level a convenient if colorless term to denote the hurly burly of environmental controversy outside the Washington beltway for example New England has taken a regional stand on tropospheric ozone control and California requires automotive pollution controls that some other jurisdictions have partially adopted this shift is a profound but not unexpected result of the way environmental policy has evolved since the modern environmental movement began around the late 1960s back then the pendulum was swinging the other way

this book is unique in identifying and presenting tools to environmental decision makers to help them improve the quality and clarity of their work these tools range from software to policy approaches and from environmental databases to focus groups equally of value to environmental managers and students in environmental risk policy economics and law

this text covers the latest decision support theories and practices used by managers and organizations
