this book gives a concise presentation of the mathematical foundations of game theory with an emphasis on strategic analysis linked to information and dynamics it is largely self contained with all of the key tools and concepts defined in the text combining the basics of game theory such as value existence theorems in zero sum games and equilibrium existence theorems for non zero sum games with a selection of important and more recent topics such as the equilibrium manifold and learning dynamics the book quickly takes the reader close to the state of the art applications to economics biology and learning are included and the exercises which often contain noteworthy results provide an important complement to the text based on lectures given in paris over several years this textbook will be useful for rigorous up to date courses on the subject apart from an interest in strategic thinking and a taste for mathematical formalism the only prerequisite for reading the book is a solid knowledge of mathematics at the undergraduate level including basic analysis linear algebra and probability

edited in collaboration with folli the association of logic language and information this book constitutes the refereed proceedings of the second international workshop on logic rationality and interaction lori 2009 held in chongqing china in october 2009 the 24 revised full papers presented together with 8 posters were carefully reviewed and selected from a flood of submissions the workshops topics include but are not limited to semantic models for knowledge for belief and for uncertainty dynamic logics of knowledge information flow and action logical analysis of the structure of games belief revision belief merging logics for preferences and utilities logics of intentions plans and goals logics of probability and uncertainty argument systems and their role in interaction as well as norms normative interaction and normative multiagent systems

the last decade witnessed an unprecedented annual growth of the literature dealing with the philosophy of economics as well as the first signs of an institutionalization conferences an international journal of the philosophy of economics as a scientific subject in itself in particular in the u s in 1981 a meeting took place with participants mainly of european continental origin in july 1987 we organized a second conference philosophy of economics ii at tilburg uni versity the netherlands mainly aiming at the establishment of first contacts between the middle european group and researchers from the u s the present volume contains the papers presented at this conference philosophical thought on economics in recent years split up in many different streams two of which are represented in the

larger part of this volume the first of these streams was formed by a group of researchers mainly from middle europe who make empirical studies of the logical structures of the different theories as they find them presented in economic literature two methods prevail here first the structuralist method as exemplified in the writings of sneid stegmüller and others of describing the object of a theory as a set of partial potential models such models consist of sets and relationships between these sets which represent the concepts used in the theory

the subject of this book is game theory and its possible applications in several fields the papers presented at the conference are sorted into three main groups games dynamic games and social games some new ideas and methods on stochastic dynamic games and bargaining games are presented and a tentative unified approach to games is sketched the book includes a discussion of game theory and of the possible applications of games a new approach to portfolio selection is presented which should give the reader some new ideas the contributors from several countries have presented their papers with the aim in mind of reaching readers who are not necessarily experts on games

game theory 5 questions is a collection of short interviews based on 5 questions presented to some of the most influential and prominent scholars in the field we hear their views on game theory its aim scope use the future direction of game theory and how their work fits in these respects

the first reference on rationality that integrates accounts from psychology and philosophy covering descriptive and normative theories from both disciplines both analytic philosophy and cognitive psychology have made dramatic advances in understanding rationality but there has been little interaction between the disciplines this volume offers the first integrated overview of the state of the art in the psychology and philosophy of rationality written by leading experts from both disciplines the handbook of rationality covers the main normative and descriptive theories of rationality how people ought to think how they actually think and why we often deviate from what we can call rational it also offers insights from other fields such as artificial intelligence economics the social sciences and cognitive neuroscience the handbook proposes a novel classification system for researchers in human rationality and it creates new connections between rationality research in philosophy psychology and other disciplines following the basic distinction between theoretical and practical rationality the book first considers the theoretical side including normative and descriptive theories of logical probabilistic causal and defeasible reasoning it then turns to the practical side discussing topics such as decision making bounded rationality game theory deontic and legal reasoning and the relation between rationality and morality finally it covers topics that arise in both theoretical and practical rationality including visual and spatial thinking scientific rationality how children learn to reason rationally and the

the papers collected here are with three exceptions those presented at a conference on probability and causation held at the university of california at irvine on july 15 19 1985 the exceptions are that david freedman and abner shimony were not able to contribute the papers that they presented to this volume and that clark glymour who was not able to attend the conference did contribute a paper we would like to thank the national science foundation and the school of humanities of the university of california at irvine for generous support william harper university of western ontario brian skyrms university of california at irvine vll introduction part i decisions and games causal notions have recently come to figure prominently in discussions about rational decision making indeed a relatively influential new approach to theorizing about rational choice has come to be called causal decision theory 1 decision problems such as newcombe s problem and some versions of the prisoner s dilemma where an act counts as evidence for a desired state even though the agent knows his choice of that act cannot causally influence whether or not the state obtains have motivated causal decision theorists
