the book set develops a bridge between physiologic mechanisms and diagnostic human engineering while the first volume is focused on the interface between physiologic mechanisms and the resultant biosignals this second volume is devoted to the interface between biosignals and biomedical sensors that is in the first volume the physiologic mechanisms determining biosignals are described from the basic cellular level up to their advanced mutual coordination level this second volume considers the genesis of acoustic and optic biosignals and the associated sensing technology from a strategic point of

view as a novelty this book discusses heterogeneous biosignals within a common frame this frame comprises both the biosignal formation path from the biosignal source at the physiological level to biosignal propagation in the body and the biosignal sensing path from the biosignal transmission in the sensor applied on the body up to its conversion to a usually electric signal some biosignals arise in the course of the body's vital functions while others map these functions that convey physiological data to an observer it is highly instructive how sound and light beams interact with biological tissues yielding acoustic and optic biosignals respectively discussed phenomena teach a lot about the physics of sound and physics of light as engineering sciences and on the other hand biology and physiology as live sciences the highly interdisciplinary nature of biosignals and biomedical sensors is obviously a challenge however it is a rewarding challenge after it has been coped with in a strategic way as offered here the book is intended to have the presence to answer intriguing aha questions

brain mind and the signifying body is an exploration of a multimodal theory of cognitive science using linguistic theories first developed by saussure and more latterly by m a k halliday paul thibault analyses how social and biological systems interact to produce meaning this fascinating study will be of interest to undergraduates and academics researching cognitive linguistics and advanced semiotics the book engages with the current dialogue between the human and life sciences to ask questions about the relationship between the physical biological aspects of a human being and the sociocultural framework in which a human being exists paul j thibault argues that we need to understand both the semiotic discursive nature of meaning making and the physical context in which this activity takes place the two are inseparable and hence the only way we can understand our subjective experience of our environment and our perceptions of our inner states of mind is by giving equal weight to both frameworks this ecosocial semiotic theory engages with linguistics semiotics activity theory biology and psychology in so doing the book produces a new way of looking at how a human being makes sense of his or her environment but also how this environment shapes such meanings
