pogil is a student centered group learning pedagogy based on current learning theory this volume describes pogil s theoretical basis its implementations in diverse environments and evaluation of student outcomes

this book discusses the importance of identifying and addressing misconceptions for the successful teaching and learning of science across all levels of science education from elementary school to high school it suggests teaching approaches based on research data to address students common misconceptions detailed descriptions of how these instructional approaches can be incorporated into teaching and learning science are also included the science education literature extensively documents the findings of studies about students misconceptions or alternative conceptions about various science concepts furthermore some of the studies involve systematic approaches to not only creating but also implementing instructional programs to reduce the incidence of these

misconceptions among high school science students these studies however are largely unavailable to classroom practitioners partly because they are usually found in various science education journals that teachers have no time to refer to or are not readily available to them in response this book offers an essential and easily accessible guide

scientists use arguments to relate the evidence that they select from their investigations and to justify the claims that they make about their observations this book brings together leading researchers to draw attention to research policy and practice around the inclusion of argumentation in chemistry education

unique new approaches for making chemistry accessible to diverse students students interest and achievement in academics improve dramatically when they make connections between what they are learning and the potential uses of that knowledge in the workplace and or in the world at large making chemistry relevant presents a unique collection of strategies that have been used successfully in chemistry classrooms to create a learner sensitive environment that enhances academic achievement and social competence of students rejecting rote memorization the book proposes a cognitive constructivist philosophy that casts the teacher as a facilitator helping students to construct solutions to problems written by chemistry professors and research groups from a wide variety of colleges and universities the book offers a number of creative ways to make chemistry relevant to the student including teaching science in the context of major life issues and stem professions relating chemistry to current events such as global warming pollution and terrorism integrating science research into the undergraduate laboratory curriculum enriching the learning experience for students with a variety of learning styles as well as accommodating the visually challenged students using media hypermedia games and puzzles in the teaching of chemistry both novice and experienced faculty alike will find valuable ideas ready to be applied and adapted to enhance the learning experience of all their students

for courses in methods of teaching chemistry useful for new professors chemical educators or students learning to teach chemistry intended for anyone who teaches chemistry or is learning to teach it this book examines applications of learning theories presenting actual techniques and practices that respected professors have used to implement and achieve their goals each chapter is written by a chemist who has expertise in the area and who has experience in applying those ideas in their classrooms this book is a part of the prentice hall series in educational innovation for chemistry

this book explores evidence based practice in college science teaching it is grounded in disciplinary education research by practicing scientists who have chosen to take wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching in editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence our primary audience consists of the thousands of dedicated faculty and graduate students

who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities in keeping with Wieman's challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences the content is structured as follows after an introduction based on constructivist learning theory section i the practices we explore are eliciting ideas and encouraging reflection section ii using clickers to engage students section iii supporting peer interaction through small group activities section iv restructuring curriculum and instruction section v rethinking the physical environment section vi enhancing understanding with technology section vii and assessing understanding section viii the book's final section ix is devoted to professional issues facing college and university faculty who choose to adopt active learning in their courses the common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years in this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base for most students that knowledge base is riddled with a host of naïve notions misconceptions and alternative conceptions they have acquired throughout their lives to a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances clearly this prescription demands far more than most college and university scientists have been prepared for

managers often isolate their innovation teams but wouldn't it be better to engage all the workers in innovation this book describes a framework that makes innovation a daily consideration for all it involves allowing a knowledge network to develop naturally which complements the existing organizational structure making it more organic it fosters more extensive collaboration amongst workers to produce more imaginative solutions that maximize value the workers are encouraged to consult one another spontaneously across their organization and beyond its traditional boundaries insightful and constructive exchanges stimulate their thinking making them creative partners unsuspected capabilities ideas and value are revealed philippe davidson describes creative deliberation techniques designed to maximize stakeholder value the framework also makes organizations nimbler and more resilient to market changes they become more sustainable in ever changing conditions because learning and change become the norm innovation champions will find powerful arguments for introducing democratized innovation in their organizations a wealth of practical techniques and handy tips for participative work based training will help organizational trainers and facilitators to democratize innovation management consultants will find invaluable insights to advise their clients on innovation your workers are your organization's best agents of change unleash their natural creativity

this edited volume of papers from the twenty first international conference on chemical

education attests to our rapidly changing understanding of the chemistry itself as well as to the potentially enormous material changes in how it might be taught in the future covering the full range of appropriate topics the book features work exploring themes as various as e learning and innovations in instruction and micro scale lab chemistry in sum the 29 articles published in these pages focus the reader s attention on ways to raise the quality of chemistry teaching and learning promoting the public understanding of chemistry deploying innovative technology in pedagogy practice and research and the value of chemistry as a tool for highlighting sustainability issues in the global community thus the ambitious dual aim achieved in these pages is on the one hand to foster improvements in the leaching and communication of chemistry whether to students or the public and secondly to promote advances in our broader understanding of the subject that will have positive knock on effects on the world s citizens and environment in doing so the book addresses as did the conference the neglect suffered in the chemistry classroom by issues connected to globalization even as it outlines ways to bring the subject alive in the classroom through the use of innovative technologies
