Getting Started with Dart

Now lets dive into the core concepts of Dart

1 Setting up Your Development Environment

To start coding in Dart youll need a development environment There are several options available but the most popular and recommended is DartPad DartPad An online code editor that allows you to write and execute Dart code directly in your browser Its a great starting point for experimenting with the language without any setup

2 The Basics of Dart Syntax

Dart uses a familiar syntax similar to other popular languages like Java and C Lets explore the core elements

Variables

Variables store data in a program In Dart you declare variables using the var keyword followed by the variable name and an assignment operator

```
dart var name Alice var age 30
```

3 Data Types

Dart supports several data types including

- Numbers Integers `int` Doubles `double`
- Strings Text enclosed in single or double quotes `Hello` or `World`
- Booleans `True` or `false` values `true` `false`
- Lists Ordered collections of elements `1 2 3`
- Maps Keyvalue pairs `name Alice age 30`

Operators

Operators are symbols used to perform operations on variables and data Common operators include Arithmetic operators Comparison operators Logical operators

3 Control Flow

Control flow statements dictate the execution order of code Here are some essential control flow structures

- `if` statement Executes a block of code only if a condition is true

```
dart if (age >= 18) { print('You are an adult'); } else { print('You are a minor'); }
```

- `for` loop Repeats a block of code multiple times

```
dart for (var i = 0; i < 5; i++) { print('Iteration $i'); }
```

- `while` loop Repeats a block of code as long as a condition is true

```
dart var count = 0; while (count < 5) { print('Count $count'); count++; }
```

4 ObjectOriented Programming OOP

Dart is an objectoriented language which means it uses objects to represent data and behavior Key OOP concepts in Dart include

- Classes Blueprints for creating objects

```
dart class Person { String name; int age; void sayHello() { print('Hello my name is $name'); } }
```

- Objects Instances of classes

```
dart var alice = Person('Alice', 30); alice.sayHello();
```

Methods

Functions associated with an object

Inheritance Allows classes to inherit properties and methods from parent classes
 Polymorphism Allows objects of different classes to be treated in a similar way
