the ninth international workshop on persistent object systems pos 9 took place at the sas radisson hotel in lillehammer norway from 6th to 8th september 2000 previous workshops in the series have been held in scotland 1 and 2 australia 3 the usa 4 italy 5 france 6 and the usa 7 and 8 in keeping with those workshops pos 9 was short but intensive fitting 28 papers and panel sessions a boat 1 excursion and some memorable meals into two and a half days the participants concentration was no doubt helped by the northern european weather that prevailed for most of the workshop continuing a trend experienced over the previous few workshops pos 9 had difficulty attracting a high number of papers of course it is hard to tell whether this is a problem with the field of persistent systems itself or merely a consequence of the increasing number of workshops conferences and journals competing for submissions in his epilogue to the proceedings ron

morrison makes some interesting suggestions for possible improvements to future pos workshops out of a total of 26 submitted papers 19 were accepted for presentation at the 2 workshop breaking down by region 6 1 2 came from the usa 1 from africa 3 1 2 from australia and 8 from europe in a new development for pos an equal number of papers came from england and from scotland

the hvac industry is undergoing a transformation driven by the need for greater energy efficiency sustainability and cost effectiveness traditional heating and cooling systems while effective often consume excessive energy and contribute significantly to carbon emissions on the other hand fully renewable hvac solutions such as geothermal or solar based systems can be costly to implement and may not always provide consistent performance in all climates this is where hybrid hvac systems come into play a balanced approach that integrates multiple heating and cooling technologies to optimize performance while reducing energy consumption and environmental impact this book hybrid hvac systems maximizing efficiency with integrated heating and cooling technologies explores the principles design considerations and applications of hybrid hvac solutions it aims to provide hvac engineers designers building owners and facility managers with a comprehensive understanding of how to integrate hybrid technologies for maximum efficiency in the chapters ahead we will discuss the components of hybrid hvac systems their various types and how they can be implemented in residential commercial and industrial settings we will also explore the role of renewable energy sources smart controls and building automation in enhancing hybrid hvac performance case studies and real world applications will provide valuable insights into successful implementations and lessons learned as the world moves toward stricter energy regulations and a push for greener buildings hybrid hvac systems will play an increasingly vital role in the industry whether you are an hvac professional looking to upgrade existing systems or an engineer designing new energy efficient buildings this book will serve as a valuable resource i hope this book will inspire new approaches to hvac system design and encourage the adoption of hybrid solutions that contribute to a more sustainable and energy efficient future charles nehme
