robert bow advocates economy in construction by finding strength and stability in a structure in its skilful arrangement rather than in the form of clumsy and expensive massiveness

excerpt from economics of construction in relation to framed structures preliminary parts part i classification of structures part ii diagrams of forces the two parts now published are calculated to form a useful manual in themselves and as they are almost altogether of a preliminary character in relation to economics of construction no introduction to that subject need here be attempted but as touching upon the neglect of that branch of engineering science i may quote the following passage with reference to british engineering from applied mechanics by the late eminent professor w j macquorn rankine in too many cases we see the strength and the stability which ought to be given by the skilful arrangement of the parts of a structure supplied by means of clumsy massiveness and of lavish expenditure of material labour and money and the evil is increased by a perversion of the public taste which causes works to be admired not in proportion to their fitness for their purposes or to the skill evinced in attaining that fitness but in proportion to their size and cost part i is devoted to the classification of structures but the illustrations are in the meantime confined to roof and bridge trusses many previous attempts have been made by others and myself in this direction but not one of those that i am acquainted with is at all satisfactory i trust that the classification now given although no doubt open to some objections will commend itself as based for the most part upon scientific distinctions a considerable number of the designs supplied to illustrate the classification are original about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

this book aims to make the nature of input output analysis in economics clearly accessible and contrary to the opinion of many commentators shows that this type of analysis can be compatible with the doctrines of neoclassical economics

in his book marktform und gleichgewicht published initially in 1934 heinrich von stackelberg presented his groundbreaking leadership model of firm competition in a work of great originality and richness he described and analyzed a market situation in which the leader firm moves first and the follower firms then move sequentially this game theoretic model now widely known as stackelberg competition has had tremendous impact on the theory of the firm and economic analysis in general and has been applied to study decision making in various fields of business as the first translation of von stackelberg s book into

english this volume makes his classic work available in its original form to an english speaking audience for the very first time

taking the new structural economics as the theoretical tools this book obtains the maximum understanding of the history development current situation and trend of the change of world economic structure as well as china s role in its development and its underlying laws and policies analyzes the polarization between the rich and poor for countries worldwide and provides a way for them to achieve common prosperity the world is going through a new round of major transformation profound adjustment has been made in international economy science culture security and politics and the international development environment is undergoing profound changes in this context this book profoundly and systematically explains the underlying economic transition logic of world development and the general trend of china s relationship with the world and presents the entire process of world economic development readers who pay close attention to the development of the world economy china s economic development and china s role in the world economy will find this book very fascinating

the rise of china s economy is an integral part of world history since 1978 china achieved tremendous economic success what is the secret behind china s economic rise this book approaches the topic by focusing on origins models and characteristics a comprehensive perspective that offers further reflection on the often discussed and ever relevant subject of china s economic rise the rise of china s economy keeps puzzling the intellectual minds with clear and professional insights the authors of the book systematically reveal the profound historical background unique development path and unparalleled characteristics of china s economic ascent compared to other countries the rise of china s economy is a result of global trends historical accumulation the wisdom of civilization as well as the collective labor struggle and creativity of the chinese people under the state s leadership

unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the quality of these images so they represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy

economic development is a process of continuous technological innovation and structural transformation development thinking

is inherently tied to the quest for sustainable growth strategies this book provides a neoclassical approach for studying the determinants of economic structure and its transformation and draws new insights for development policy the market is the basic mechanism for effective resource allocation at each level of development however economic development as a dynamic process entails structural changes including industrial upgrading and diversification and corresponding improvements in hard and soft infrastructure such upgrading and improvements require coordination and go hand in hand with large externalities to firms transaction costs and returns to capital investment thus in addition to an effective market mechanism the government should play an active role in facilitating structural changes the book provides empirical evidence in support of this framework as well as concrete advice to development practitioners

adopting perspectives from development economics and international relations this book researches the ongoing cooperation between china and african countries and the interactive system of china s aid trade and investment to and with africa in reviewing the history and development of china africa relations from the founding of the people s republic to the new century this book analyses the achievements opportunities and challenges of the bilateral relationship and reflects on the public private partnership model in the context of international development assistance coupled with experiences from the united states japan and the eu in the field of foreign aid trade and investment as well as case studies from china the core chapters delve into china africa cooperation in terms of aid trade and investment and proposes to build an interactive and coordinated mechanism of china s aid trade and investment in africa the author argues that china africa cooperation goes beyond reciprocal benefits offering a possible model for south south cooperation and a potential model for balanced and sustainable development within the world economy this book will appeal to researchers students and policy makers interested in chinese politics and foreign policy african politics international relations international diplomacy and the world economy

mathematics in science and engineering volume 51 convex structures and economic theory consists of an account of the theory of convex sets and its application to several basic problems that originate in economic theory and adjacent subject matter this volume includes examples of problems pertaining to interesting static and dynamic phenomena in linear and nonlinear economic systems as well as models initiated by leontief von neumann and walras the topics covered are the mathematical theorems on convexity simple multisector linear systems balanced growth in nonlinear systems and efficient allocation and growth the working of walrasian competitive economies special features of competitive economies and jacobian matrix and global univalence are also covered this publication is suitable for advanced students of mathematical economics and related

fields but is also beneficial for anyone who wishes to become familiar with the basic ideas methods and results in the mathematical treatment in economic theory through a detailed exposition of a number of typical representative problems
