this edited volume brings together a group of international researchers and theorists from various intellectual and analytic traditions to explore the role uncertainty plays in creativity learning and development contributors to this volume draw on existing programs of research as well as introduce new and even speculative directions for research theory and practice learning and life are filled with uncertainty although the experience of uncertainty can cause emotional discomfort or cognitive rigidity uncertainty serves as a catalyst and condition for change in this way uncertainty represents a core facet in the interrelationship among creativity learning and development considerations for both the benefits and potential costs of uncertainty will be addressed in this volume with an aim of understanding how uncertainty can be better understood in light of creativity learning and development taken together this volume stands to contribute to our collective understanding of the role that uncertainty plays in learning and life and highlights how conceptualizing and studying uncertainty in new ways can promote positive and lasting change

in traditional bond markets sovereign bonds provide benchmarks and serve as catalysts for the corporate bond market development contrary to the usual sequence of bond market development sovereign issuers are latecomers to

sustainable bond markets yet our empirical study finds that sovereign green bond issuance can have quantitative and qualitative benefits for the development of private sustainable bond markets our results suggest that both the number and the size of corporate green bond issuance increase more in a jurisdiction after the sovereign debut the results are more pronounced in countries with stronger climate policies sovereign green bond issuance also improves the quality of green verification standards in the corporate bond market more generally consistent with the aim of fostering third party reviews and promoting best practice in green reporting and verification finally our work provides evidence that the sovereign debut increases liquidity and diminishes yield spreads of corporate green bonds in the same jurisdiction

a catalyst is a material of constant composition which accelerates the rate of a chemical reaction by providing a suitable reaction pathway with the lowest activation energy as the activation energy is lower more reaction products are formed in the same period of time most catalytic reactions encountered in hydrocarbon processing are carried out with porous catalysts to provide a sufficient surface area for the metal dispersion and the ensuing reaction these catalysts gradually lose their catalytic activity usually through structural changes poisoning or the deposit of extraneous material a catalyst which can no longer exhibit the necessary activity and or is specificity required by the user is referred to as a spent catalyst catalysts are critical to the chemical industry and are now used in most industrial chemical processes along with the rapid development and wide application of catalysis technology the amounts of different spent catalysts are increased from year to year the physical properties of spent catalysts as well as their composition are generally different from those of fresh catalysts for example spent hydrotreating catalysts contain metal sulfides and coke and may have additional contaminants that were not present in the fresh catalyst catalyst regeneration involves the processing of spent catalysts in order to make them reusable this is done by restoring the initial properties of spent catalysts and thus restoring their efficiency through a process called regeneration of catalysts traditional methods of vapor air regeneration are energy consuming and severely limit the number of regeneration cycles using supercritical fluid co₂ extraction process according to some estimates provides a two fold energy savings and an increasing number of regeneration cycles possible this book gathers a series of studies describing new methods for the regeneration of heterogeneous catalysts for important industrial chemical processes in this book we propose new extraction techniques using supercritical fluid extraction sfc which seems

to be one of the most promising as a green reaction medium the feasibility of using supercritical fluid 2 extraction process was investigated in particular for spent catalyst regeneration the low regeneration temperature of supercritical carbon dioxide eliminates the risk of thermal deterioration of the catalyst namely the collapse of the pores prevents the reduction of the surface area and the sintering and allows regeneration of catalysts with an activity close to that of fresh catalysts the results of the implementation of the supercritical fluid 2 extraction process with respect to samples of industrial deactivated catalysts are provided a comparison of the characteristics of the regenerated catalyst samples by traditional approaches and the sc co₂ extraction process is carried out the possibility of using a supercritical fluid co₂ impregnation technique in the synthesis of a palladium catalyst is also studied
