engine emissions pollutant formation and advances in control technology provides an up to date reference to academics and professionals on emissions from si and ci engine powered vehicles in this text mechanism of formation of engine emissions effect of engine design and operation variables world wide vehicle emission standards and emission measurement and test procedures are presented advances in emission control technology that have taken place from those used initially and up to the ones employed on the present day vehicles meeting the stringent emission regulations e g euro 4 ulev sulev standards are discussed newer developments on exhaust aftertreatment such as hc adsorber systems no traps and other de no catalysts and advanced engines like gdi and hcci engines are covered in the book jacket

contributed papers presented at the 7th national conference on air breathing engines and aerospace propulsion hosted at i i t kanpur

this book introduces the reader to fundamentals of engine combustion processes and pollutant formation combustion thermodynamics conceptual and thermodynamic engine combustion models fluid motion in the cylinder the conventional and advanced combustion systems such as for disc cai and hcci engines are discussed for a wider coverage on the subject emission measurement alternative propulsion systems are included in this text laser based and other combustion diagnostic techniques are outlined to introduce readers to modern combustion research methods the book attempts to present theoretical aspects and the practices including the latest developments in engine and emission control technology

this book describes the feasibility and status of the use of alternative fuels in marine engineering as well as the application of liquefied

natural gas biodiesel and their blends as marine fuels and the combustion of synthetic coal based fuels each chapter in the book ends with a summary which gives the reader a quick and clear understanding of the main contents of the chapter the book gives a lot of advice on the selection of equipment and parameters fuel reserves and preparation for scholars related to alternative fuels in ships and points them in the way it contains lots of illustrations and tables and explains it in the form of chart comparison the authors have developed mathematical models and methods for calculating the parameters of fuel systems for biodiesel fuels and liquefied natural gas recommendations for choosing the rational parameters of these systems are given as are schematic solutions of the fuel systems recommendations for selecting equipment storing and preparing the fuels application of the materials described in the book provides the spp designers with a reliable tool for choosing rational characteristics of the fuel systems operating on alternative fuels and improving the efficiency of their application on ships

urban transport is a conspicuous contributor to the accelerating pollution levels and the consequent menace to the health of citizens

introduces readers to the fundamentals of formation of pollutant formation in ic engines and advances in the engine emission control that have taken place over recent years

includes transcript of papers presented during a cse conference held in new delhi from march 30 april 1 2004
