this book concerns the various ways that primates respond to environmental change by studying these patterns of responsiveness we not only gain useful knowledge about the structural physiological and behavioural propensities of different species but also acquire important information relating to issues of contemporary concern such as conservation and the management of animals in the wild as well as in various forms of captivity for example there is growing concern among biologists and conservationists about the influence of habitat destruction such as logging on the fitness and survival of wild primates there is also increased awareness of the need to improve the care of primates in zoos and laboratories including the enrichment of captive environments further because an increasing number of primate species are becoming endangered knowledge of their responsiveness to new environments is an essential requirement for effective breeding programmes in captivity and for the translocation and rehabilitation of species in the wild in theory studies of many closely related species are required in order to consider relevant evolutionary processes as well as to develop functional hypotheses about the adaptive significance of various biological propensities and their interrelationships in the short and longer terms

zoo animals as a population are a diverse array of species from all around the globe when managed in captivity it is important that key aspects of natural ecology are factored into animal care as well as considerations relating to welfare life history and behavioural needs the behavioural biology of zoo animals is the first book on captive animal behaviour and how this applies to welfare the book enables all aspects of zoo husbandry and management nutrition enclosure design handling and training enrichment population management to be based on a sound knowledge of the species its evolutionary history and its natural history chapters from expert authors cover a vast range of taxa from primates and elephants to marine mammals and freshwater fish to reptiles birds and invertebrates a final part looks to the future considering animal health and wellbeing the visitor experience and future visions for zoos and aquariums for on the ground practitioners as well as students of zoo biology animal science and welfare this book provides an explanation of key areas of behavioural biology that are important to fulfilling the aims of the modern zoo conservation education research and recreation it explains how evidence from the wild can be implemented into captive care to support the wider aims of the zoo shedding light on the evidence

within the disciplines of anthropology medicine psychology and zoology the primate mother infant relationship has been studied extensively in terms of either its evolution adaptive function causation disruption or consequences between these disciplines however there has been only limited exchange of theory and evidence relating to the study of motherhood and this is true for human motherhood specifically and primate motherhood in general this situation needs rectifying because a clear and detailed understanding of the biosocial regulation of human motherhood is best achieved using a comparative and interdisciplinary approach edited by two primatologists and a child psychiatrist this book contains the proceedings of a recent symposium where the theory and evidence relating to the biosocial regulation of motherhood were integrated across the primate order seventeen contributors representing many of the world's leading groups engaged in research on primate mother infant behaviour present their very latest ideas experimental findings and theoretical interpretations the application of the evidence from studies of nonhuman primates to human maternal care and vice versa is discussed the major emphasis is on improved understanding of human motherhood including clarification of the unique aspects of its biosocial regulation the book should provide a major impetus for future research into primate motherhood at the interface of the natural social and clinical sciences book jacket title summary field provided by blackwell north america inc all rights reserved
