recent scientific and technical advances have made it possible to create matter in the laboratory under
conditions relevant to astrophysical systems such as supernovae and black holes these advances will also
benefit inertial confinement fusion research and the nation s nuclear weapon s program the report describes
the major research facilities on which such high energy density conditions can be achieved and lists a
number of key scientific questions about high energy density physics that can be addressed by this research
several recommendations are presented that would facilitate the development of a comprehensive strategy

for realizing these research opportunities

the book will be an open learning distance learning text in the analytical techniques for the sciences and covering analytical techniques used in forensic science no prior knowledge of the analytical techniques will be required by the reader an introductory chapter will provide an overview of the science of the materials used as forensic evidence each of the following chapters will describe the techniques used in forensic analysis the theory instrumentation and sampling techniques will be explained and examples of the application of each technique to particular forensic samples will be provided the reader will be able to assess their understanding with the use of regular self assessment questions and discussion questions throughout the book the user of the book will be able to apply their understanding to the application of specific techniques to particular analyses encountered in their professional life
