this volume written by his friends collaborators and students is offered to the memory of paul turan most of the papers they contributed discuss subjects related to his own fields of research the wide range of topics reflects the versatility of his mathematical activity his work has inspired many mathematicians in analytic number theory theory of functions of a complex variable interpolation and approximation theory numerical algebra differential equations statistical group theory and theory of graphs beyond the influence of his deep and important results he had the exceptional ability to communicate to others his enthusiasm for mathematics one of the strengths of turan was to ask unusual questions that became starting points of many further results sometimes opening up new fields of research we hope that this volume will illustrate this aspect of his work adequately born in budapest on august 28 1910 paul turan obtained his ph d under l fejer in 1935 his love for mathematics enabled him to work even under inhuman circumstances during the darkest years of the second world war one of his major achievements his power sum method originated in this period after the war he was visiting professor in denmark and in princeton in 1949 he became professor at the eotvos lorand university of budapest a member of the hungarian academy of sciences and a leading figure of the hungarian mathematical community

the audience remains much the same as for the 1992 handbook namely mathematics education researchers and other scholars conducting work in mathematics education this group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics the intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work the handbook should also be a useful textbook for graduate research seminars in addition to the audience mentioned above the present handbook contains chapters that should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment taken as a whole the chapters reflects the mathematics education research community s willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community

alan 1 bishop the first international handbook on mathematics education was published by kluwer academic publishers in 1996 however most of the writing for

that handbook was done in 1995 and generally reflected the main research and development foci prior to 1994 there were four sections 36 chapters and some 150 people contributed to the final volume either as author reviewer editor or critical friend the task was a monumental one attempting to cover the major research and practice developments in the international field of mathematics education as it appeared to the contributors in 1995 inevitably there were certain omissions some developments were only starting to emerge and some literatures were only sketchy and speculative however that handbook has had to be reprinted three times so it clearly fulfilled a need and i personally hope that it lived up to what i wrote in its introduction the handbook thus attempts not merely to present a description of the international state of the field but also to offer synthetic and reflective overviews on the different directions being taken by the field on the gaps existing in our present knowledge on the current problems being faced and on the future possibilities for development bishop et al 1996 since that time there has been even more activity in our field and now seems a good time to take stock again to reflect on what has happened since 1995 and to create a second handbook with the same overall goals
