algebraic theories and algebraic categories offer an innovative and revelatory description of the syntax and the semantics an algebraic theory is a concrete mathematical object the concept namely a set of variables together with formal symbols and equalities between these terms stated otherwise an algebraic theory is a small category with finite products an algebra or model of the theory is a set theoretical interpretation a possible meaning or more categorically a finite product preserving functor from the theory into the category of sets we call the category of models of an algebraic theory an algebraic category by generalising the theory we do generalise the models this concept is the fascinating aspect of the subject and the reference point of our project we are interested in the study of categories of models we pursue our task by considering models of different theories and by investigating the corresponding categories of models they constitute we analyse localizations namely fully faithful right adjoint functors whose left adjoint preserves finite limits of algebraic categories and localizations of presheaf categories these are still categories of models of the corresponding theory we provide a classification of localizations and a classification of geometric morphisms namely functors together with a finite limit preserving left adjoint in both the presheaf and the algebraic context

this volume is a collection of essays in honour of professor mohammad ardeshir it examines topics which in one way or another are

connected to the various aspects of his multidisciplinary research interests based on this criterion the book is divided into three general categories the first category includes papers on non classical logics including intuitionistic logic constructive logic basic logic and substructural logic the second category is made up of papers discussing issues in the contemporary philosophy of mathematics and logic the third category contains papers on avicenna s logic and philosophy mohammad ardeshir is a full professor of mathematical logic at the department of mathematical sciences sharif university of technology tehran iran where he has taught generations of students for around a quarter century mohammad ardeshir is known in the first place for his prominent works in basic logic and constructive mathematics his areas of interest are however much broader and include topics in intuitionistic philosophy of mathematics and arabic philosophy of logic and mathematics in addition to numerous research articles in leading international journals ardeshir is the author of a highly praised persian textbook in mathematical logic partly through his writings and translations the school of mathematical intuitionism was introduced to the iranian academic community

algebraic k theory encodes important invariants for several mathematical disciplines spanning from geometric topology and functional analysis to number theory and algebraic geometry as is commonly encountered this powerful mathematical object is very hard to calculate apart from quillen s calculations of finite fields and suslin s calculation of algebraically closed fields few complete calculations were available before the discovery of homological invariants offered by motivic cohomology and topological cyclic homology this book covers the connection between algebraic k theory and bökstedt hsiang and madsen s topological cyclic homology and proves that the difference between the theories are locally constant the usefulness of this theorem stems from being more accessible for calculations than k theory and hence a single calculation of k theory can be used with homological calculations to obtain a host of nearby calculations in k theory for instance quillen s calculation of the k theory of finite fields gives rise to hesselholt and madsen s calculations for local fields and voevodsky s calculations for the integers give insight into the diffeomorphisms of manifolds in addition to the proof of the full integral version of the local correspondence between k theory and topological cyclic homology the book provides an introduction to the necessary background in algebraic k theory and highly structured homotopy theory collecting all necessary tools into one common framework it relies on simplicial techniques and contains an appendix summarizing the methods widely used in the field the book is intended for graduate students and scientists interested in algebraic k theory and presupposes a basic knowledge of algebraic topology

a foundation in mechanics principles with integrated engineering design problems recognized for its accuracy and reliability engineering mechanics statics has provided a solid foundation of mechanics principles for decades the ninth edition helps students develop problem solving skills this text for australia and new zealand includes helpful sample and practice problems it guides students in developing visualization and problem solving skills by focusing on the drawing of free body diagrams a key skill for solving mechanics problems
