this book is not a conventional history of mathematics as such a museum of documents and scientific curiosities instead it identifies this vital science with the thought of those who constructed it and in its relation to the changing cultural context in which it evolved particular emphasis is placed on the philosophic and logical systems from aristotle onward that provide the basis for the fusion of mathematics and logic in contemporary thought

in this volume van der auwera attempts to clarify the idea that language reflects both mind and reality and to elucidate the reflection idea by turning it into the cornerstone of a linguistic theory of meaning

this book takes an idea first explored by medieval logicians 800 years ago and revisits it armed with the tools of contemporary linguistics logic and computer science the idea the holy grail of the medieval logicians was the thought that all of logic could be reduced to two very simple rules that are sensitive to logical polarity for example the presence and absence of negations ludlow and zivanovi pursue this idea and show how it has profound consequences for our understanding of the nature of human inferential capacities they also show its consequences for some of the deepest issues in contemporary linguistics including the nature of quantification puzzles about discourse anaphora and pragmatics and even insights into the source of aboutness in natural language the key to their enterprise is a formal relation they call p scope a polarity sensitive relation that controls the operations that can be carried out in their dynamic deductive system they show that with p scope in play deductions can be carried out using sublogical operations like those they call copy and prune operations that are simple syntactic operations on sentences they prove that the resulting deductive system is complete and sound the result is a beautiful formal tapestry in which p scope unlocks important properties of natural language including the property of restrictedness which they prove to be equivalent to the semantic notion of conservativity more than that they show that restrictedness is also a key to understanding quantification and discourse anaphora and many other linguistic phenomena
