preventive medicine between obligation and aspiration is a study of ethical questions regarding mass screening vaccination and health policy programmes these interventions aim to enhance public health but may also constrain personal

autonomy and cause harm and influence our moral views so far these issues have hardly been subject to systematic ethical analysis this study aims to fill this gap by providing an overview of moral problems in preventive medicine and by explicating norms for good practice throughout the book it is argued that some moral concerns about prevention namely concerns about medicalization cannot be adequately grasped in terms of strict and binding moral norms various moral concepts and types of norms beyond obligation are explored and developed in order to give practical meaning to these rather vague concerns in this way the book contributes to applied ethics as well as to ethical theory it is of interest to professionals in public health and preventive medicine and to scholars in applied ethics and moral philosophy
