it has been said that every generation of historians seeks to rewrite what a previous generation had established as the standard interpretations of the motives and circumstances shaping the fabric of historical events it is not that the facts of history have changed no one will dispute that the battle of waterloo occurred on june 11 1815 or that the allied invasion of europe began on june 6 1944 what each new age of historians are attempting to do is to reinterpret the motives of men and the force of circumstance impacting the direction of past events based on the factual social intellectual and cultural milieu of their own generation by examining the facts of history from a new perspective today s historians hope to reveal some new truth that will not only illuminate the course of history but also validate contempor ary values and societal ideals although it is true that tackling the task of developing a new text on logistics and distribution channel management focuses less on schools of philosophical and social analysis and more on the calculus of managing sales campaigns inventory replenishment and income statements the goal of the management scientist like the historian is to merge the facts and figures of the discipline with today s organizational cultural and economic realities hopefully the result will be a new synthesis where a whole new perspective

will break forth exposing new directions and opportunities

as the united states continues to debate reform of its healthcare system this book argues that providing health insurance for all without improving the delivery system will not improve the current problems of access affordability and quality the us healthcare system has many excellent components strong scientific input extraordinary technology for diagnosis and treatment dedicated staff and top class facilities among them but the system has evolved haphazardly over time and although it has not failed entirely the authors argue that like any system where attention is paid to individual components at the expense of the system as a whole it can never hope to succeed above all they point out that the us system does not provide high value healthcare it has the highest costs in the world and yet many other countries have lower infant mortality rates and better life expectancy together with a team of highly regarded thought leaders the authors of this publication advocate a complete re thinking of healthcare from a systems perspective an engineering approach to healthcare and they then describe how to set about it covering a wide range of subjects including health care costs and economics barriers to change integrated health systems electronic records and computer based patient support as well as patient safety and palliative and chronic care this book will be of interest to all those involved in healthcare provision whose goal is affordable care to promote healthy high quality lives

when it comes to very highly complex commercially funded product development projects it is not sufficient to apply standard project management techniques to manage and keep them under control instead they need a project management approach which is perfectly adapted to their complex nature this however may

generate additional cost and a dilemma arises because in commercially driven product developments there is the natural tendency to limit the management related costs the development of a new commercial aircraft is no exception in fact it can be regarded as an extreme example of this kind of project this is why it is especially useful to analyse the project management capabilities and practices needed to manage them cost reductions can still be achieved by concentrating on the essential elements of some project management disciplines to maintain their principal strengths and combining them in a pragmatic way on the basis of an integrated architecture this book goes beyond descriptions of management disciplines found elsewhere in its treatment of the architecture integration necessary to interlink product process and resources data only with this connectedness can the interoperation of the management essentials yield maximum efficiency and effectiveness commercial aircraft projects managing the development of highly complex products proposes an integrated architecture and details step by step how it can be used for the management of commercial aircraft development projects the findings can also be applied to other industrial sectors that produce complex hardware based on design inputs
