labor market deregulation intended to boost productivity and employment is one plausible yet little studied driver of the decline in labor shares that took place across most advanced economies since the early 1990s this paper assesses the impact of job protection deregulation in a sample of 26 advanced economies over the period 1970 2015 using a newly constructed dataset of major reforms to employment protection legislation for regular contracts we apply the local projection method to estimate the dynamic response of the labor share to our reform events at both the country and the country industry levels for the latter we employ a differences in differences identification strategy using two identifying assumptions grounded in theory namely that job protection deregulation should have larger negative effects in industries characterized by i a higher natural propensity to adjust the workforce and ii a lower elasticity of substitution between capital and labor we find a statistically significant economically large and robust negative effect of deregulation on the labor share in particular illustrative back of the envelope calculations suggest that job protection deregulation may have contributed about 15 percent to the average labor share decline in advanced economies together with existing evidence regarding the macroeconomic gains from job protection and other labor market reforms our results also point to the need for policymakers to address efficiency equity trade offs when designing such reforms

this paper documents the downward trend in the labor share of global income since the early 1990s as well as its heterogeneous evolution across countries industries and worker skill groups using a newly assembled dataset and analyzes the drivers behind it technological progress along with varying exposure to routine occupations explains about half the overall decline in advanced economies with a larger negative impact on middle skilled workers in emerging

markets the labor share evolution is explained predominantly by global integration particularly the expansion of global value chains that contributed to raising the overall capital intensity in production

the labor share in europe has been on a downward trend this paper finds that the decline is concentrated in manufacture and among low to mid skilled workers the shifting nature of employment away from full time jobs and a rollback of employment protection unemployment benefits and unemployment benefits have been the main contributors technology and globalization hurt sectors where jobs are routinizable but helped others that require specialized skills high skilled professionals gained labor share driven by productivity aided by flexible work environments while low and mid skilled workers lost labor share owing to globalization and the erosion of labor market safety nets
