this volume of the lecture notes in computer science series contains all the papers accepted for presentation at the second IEEE International Workshop on Self-Managed Networks Systems and Services SelfMan 2006 which was held at University College Dublin Ireland on June 16 2006 this workshop follows up on a very successful edition that took place last year in Nice France the online proceedings of SelfMan 2005 are available at [madynes.loria.fr/selfman2005](http://madynes.loria.fr/selfman2005) the objectives of this year's edition were to bring together people from different communities networking distributed systems software engineering p2p service engineering distributed artificial intelligence robotics etc and cross-pollinate their experience in designing and implementing self-managed networks systems and services we received 51 papers from 21 countries of which 12 were selected the acceptance ratio was below 24 in addition we selected three work-in-progress papers for short presentations this one-day event was structured so as to encourage discussions and foster collaborations the breadth of the topics presented herein reflects the current interest and developments in this rapidly growing field it is also a testimony to the promises of self-management to design operate and manage today's increasingly complex and heterogeneous networks systems and services

this research attempts to evaluate nitrification treatment performance in combined carbon nitrogen municipal wastewater reactors using traditional physical chemical methods and modern molecular techniques bench scale activated sludge reactors were operated at different srt's under varying do levels and temperatures over a 21 month period real time pcr assays were used to determine cell concentrations of total bacterial 16s rdna a gross measure of biomass content the amoA gene a measure of ammonia oxidizing bacteria aob and the nitrospira 16s rdna gene a measure of nitrite oxidizing bacteria nob as expected gravimetric biomass and total bacterial 16s rdna levels increased with increasing srt ammonia oxidation rates and n oligotropha type aob concentrations did not follow similar trends with respect to changes in srt temperature and do nor were they highly correlated the concentration of available nitrite and srt were positively correlated with nitrospira cell densities while do concentration and temperature were negatively correlated with nob levels the percentage of the total population comprised of aob and nob obtained with the real time pcr assays were compared to predicted values estimated from design equations using typical kinetic parameters while the percentages of nob measured using the real time pcr assay corresponded very well with the predicted values the measured percentages of aob were much lower than those estimated from the design equations suggesting that n oligotropha type aob were not the dominant ammonia oxidizing species in these reactors this publication can be purchased and downloaded via pay per view on water intelligence online click on the pay per view icon below

this seventh symposium in the series of biennial gothenburg symposia taking place in edinburgh 1996 continues to bring together research scientists designing and operating engineers and funding and supervising administrators it also has enlarged the scope of its platform by bringing together concerned specialists from western countries and central and eastern europe and furthermore attempts to bridge the gap between developing and industrialized countries the traditionally presented topics such as treatment of potable water and wastewater predominantly by chemical means are of utmost importance for those that need immediate action at reasonable costs it is particularly noteworthy that an increasing number of contributions address these problems of the emerging need for environmental protection and more and more presentations are delivered by experts from central and eastern europe and from developing countries again the proceedings of this seventh symposium indicate and demonstrate new developments that advance the field of water and wastewater treatment besides the ever present topics there is now a whole section on automation and control a highly significant topic for water technology that so far has not received too much attention in symposia of this kind addressing theoreticians and practitioners at the same time

coronaviruses have emerged during the past ten years from being a group of viruses causing a variety of minor veterinary and human diseases to a major virus group of both clinical significance and molecular biological interest against this background two international coronavirus symposia were held in 1980 and 1983 in recent years the pace of coronavirus research has been quickened even more by infusion of recombinant dna technology and establishment of various animal model systems to study the pathogenesis and immunology of coronavirus infections we therefore organized the third international coronavirus symposium held at asilomar california in september 1986 which was attended by more than 120 participants representing a cross section of both academia and industry this symposium provided an exciting and stimulating forum for assessing the progress made since the last triennial symposium in netherlands and to suggest the directions for future efforts this volume collects the scientific papers presented in this symposium three loosely defined areas molecular biology virus cell interaction and viral pathogenesis are separated these papers very nicely summarize the current status of coronavirus research they contain a large amount of sequence data including the complete sequence of a 27 kb

coronavirus genome a novel mechanism of mrna synthesis that is unique to coronviruses and many exciting aspects of coronavirus pathogenesis and immunology reflecting the growing interest in the preparation of vaccines several papers also address the issues related to coronavirus vaccines which is an area new to this symposium dr

encyclopedia of renewable energy sustainability and the environment four volume set comprehensively covers all renewable energy resources including wind solar hydro biomass geothermal energy and nuclear power to name a few in addition to covering the breadth of renewable energy resources at a fundamental level this encyclopedia delves into the utilization and ideal applications of each resource and assesses them from environmental economic and policy standpoints this book will serve as an ideal introduction to any renewable energy source for students while also allowing them to learn about a topic in more depth and explore related topics all in a single resource instructors researchers and industry professionals will also benefit from this comprehensive reference covers all renewable energy technologies in one comprehensive resource details renewable energies processes from production to utilization in a single encyclopedia organizes topics into concise consistently formatted chapters perfect for readers who are new to the field assesses economic challenges faced to implement each type of renewable energy addresses the challenges of replacing fossil fuels with renewables and covers the environmental impacts of each renewable energy

no 2 pt 2 of november issue each year from v 19 1963 47 1970 and v 55 1972 contain the abstracts of papers presented at the annual meeting of the american society for cell biology 3d 1963 10th 1970 and 12th 1972

the symposium upon which this book is based combines the findings of both plant and animal scientists encouraging them to share their outlook and experiences in the common ground of hormone perception and signal transduction
